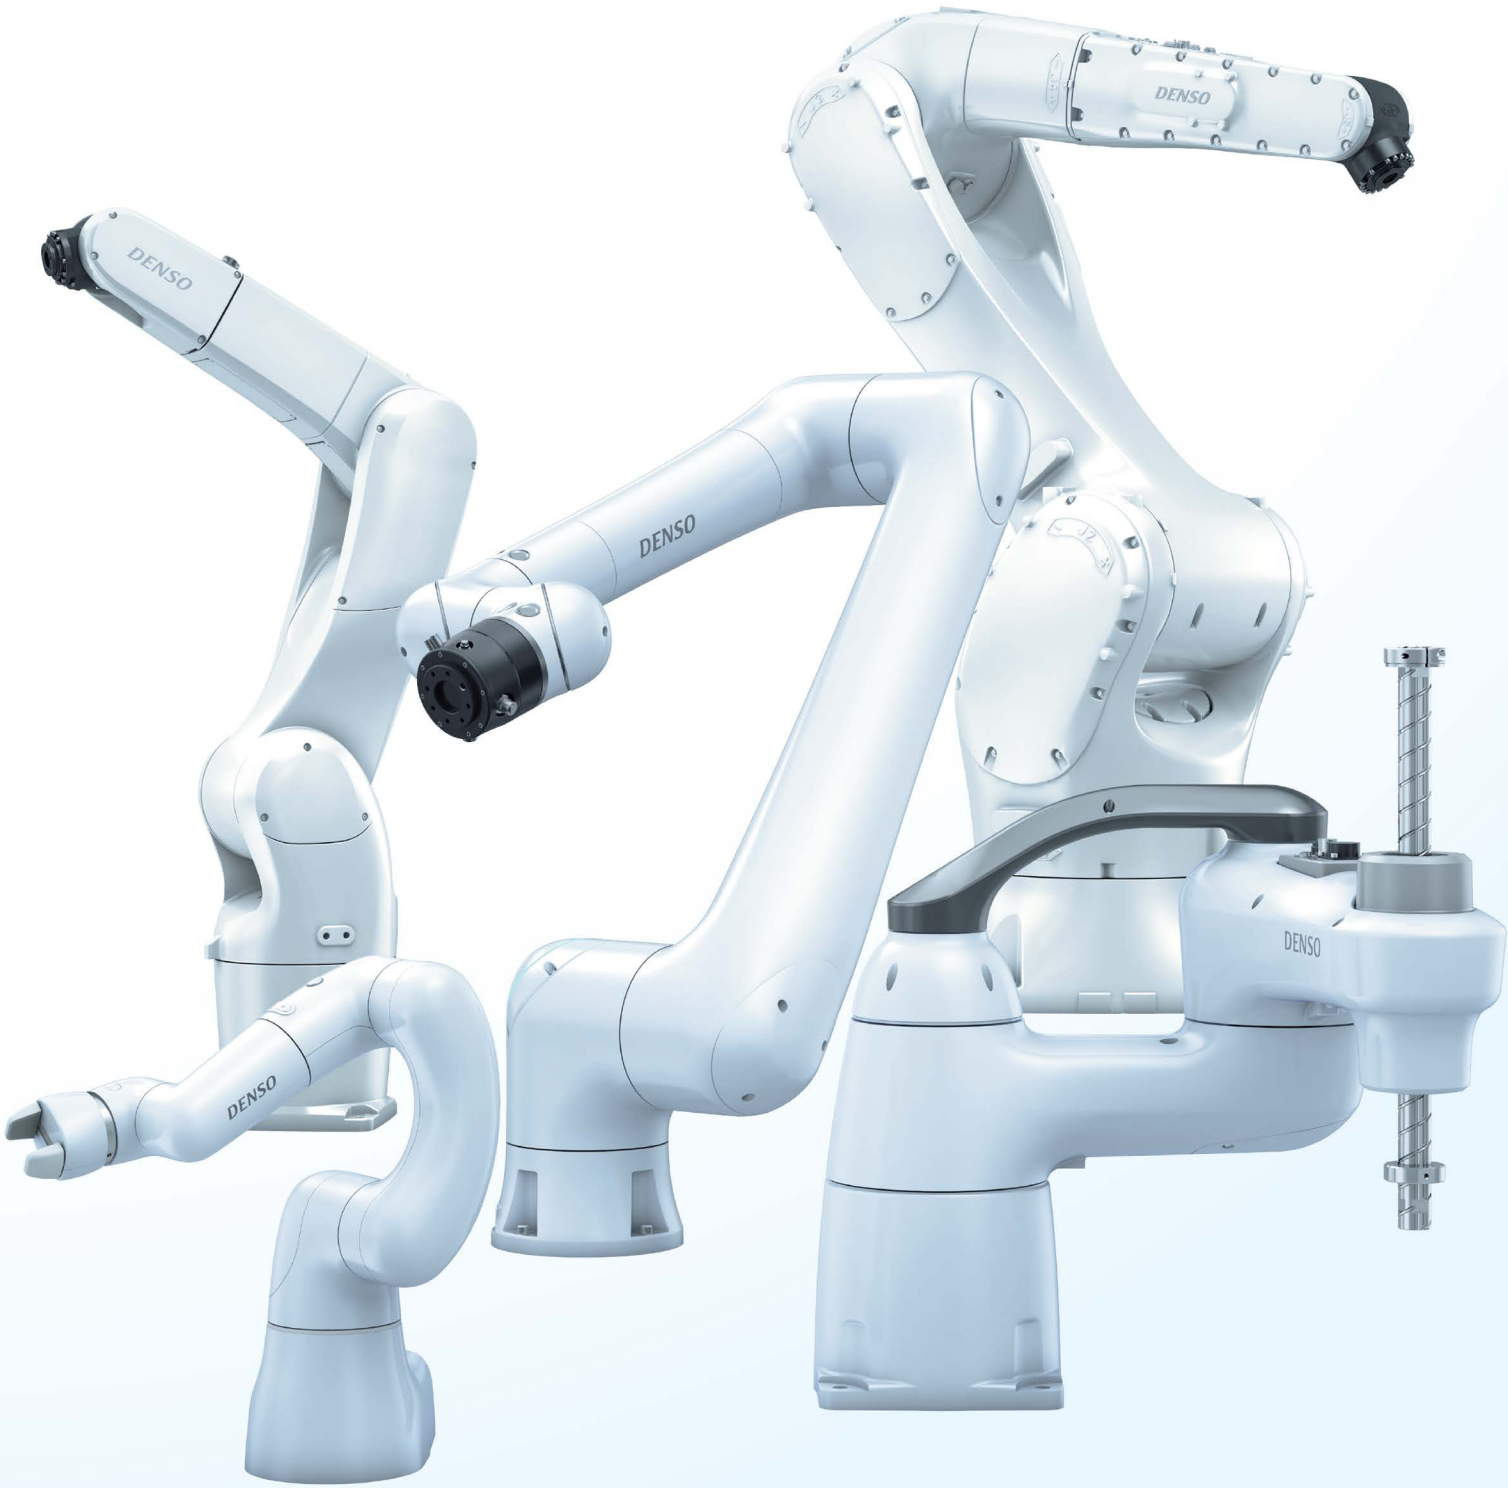
DENSO Robotics®

General Product Catalog

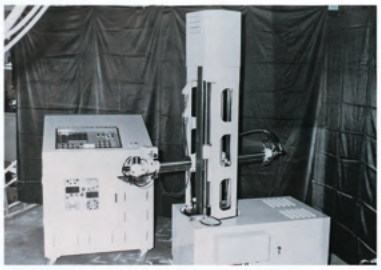
DENSO



HISTORY

Create a people-oriented bright society with our refined robot technology.

DENSO is pursuing productivity by creating environments where people can work in a manner befitting human beings. Our concept of production with a focus on human beings is the starting point for our development of robots. We apply our experience of using production technologies at our production sites to product development, which drives our continuing efforts to create high-performance robots that are easy to use. We are approaching the 56th anniversary; we have sold approximately 120,000 robots since we began development.



Aluminum die-casting operation robot

1967 To enable people to work in environments befitting human beings

In 1967, DENSO began development of DENSO Robotics products with the aim of freeing employees from the burden of dangerous work and working in adverse environments. Appearing in 1969, the first practical unit was a robot designed for aluminum diecasting work. This freed workers from exposure to the heat produced by die-casting processes and led to improved quality through repeated robot movements and enhanced productivity through unmanned operation.

1985 Continuing refinement at in-house factories

In pursuit of improved productivity, DENSO Robotics' practical implementation of horizontally and vertically-articulated robots for in-house auto-parts assembly processes has progressed since around 1985. We have reflected the experience gained through the introduction of robots on production lines with stringent quality, delivery and cost requirements to realize dramatic evolution in robot performance. At the present time, DENSO has introduced more than 20,000 robots in its in-house factories.

Mid-sized 4-axis robot

1991 Introduction of robot technology to the world

Based on the ambition of "making major contributions to the world with robot technologies refined in-house," DENSO launched fully-fledged outside sales in 1991. We have taken on board customer needs obtained directly from production sites to improve performance and add new functions. As a result, DENSO Robotics products are now widely used not only in the auto-industry, but also electrical and electronic industries, food processing and pharmaceuticals

Mid-sized 4-axis robot
HM (1st generation)

1998 Greater ease of handling

1998 saw the adoption of the world's first use of a graphical user interface (GUI) in teaching pendant control panels in the robot industry *.
The resulting intuitive easy-to-understand UI has improved user operability and reduced the time consumed by robot introduction, adjustment and maintenance. The GUI has further evolved into the current RC8A controller. *According to our research

Teaching pendant with GUI

Pharmaceutical/ medical robot VS050S2

2014 Provision of safety and quality in the fields of food processing and medical treatment

The year 2014 saw the development of VS050S2, a robot compatible with sterile environments. It is now possible to automate drug dispensing and discovery processes and prevent exposure of workers to hazardous substances and other dangers. The Fraunhofer-Gesellschaft research institute has verified the high level of hygiene of VS050S2. (Report No. DE1409-725)

2016 Achievement of the ultimate basic performance

Robot performance may not be estimated with catalog values. Fully committed to on-site "usability," in 2016, DENSO Robotics developed the HSR series, a lineup of new high-speed SCARA robots in pursuit of the basic performance elements of "quick acceleration," "runs continuously," and "stops precisely." DENSO Robotics will continue to meet the challenge of going beyond the limits of performance.

4-axis robot HSR Series

COLLABORATIVE ROBOTS COBOTTA

2018 A robot that collaborates with people.

COBOTTA, our first industrial compact collaborative robot, was released In 2018. Do you need that extra hand? Do you want to leave simple tasks to robots, and make more time for creative work? COBOTTA will open infinite possibilities to address your needs, and realize creative, new ideas.

2020 Now with high-payload robots

We've added the VMB and VLA series of high-payload and long-reach models to a line that previously consisted primarily of conventional compact robots. Together with the existing product lineup, DENSO Robotics can accommodate full automation of manufacturing processes.

5- and 6-axis robot VMB VLA

Collaborative robot COBOTTA PRO

2023 High-speed collaborative robot

COBOTTA PRO is designed not only to collaborate with an operator but also to consistently improve productivity.It delivers both productivity and safety for not only simple tasks but also multi-process tasks such as assembly and inspections.

We strive to supply easy-to-use robots to everyone who's involved with robots.

Recent years have brought more opportunities for customers in a diverse array of industries to use robots.
Our goal is to supply easy-to-use robots to everyone who's involved with robots.
What does it mean for a robot to be easy to use?
Some customers wish to implement highly difficult equipment designs that integrate a development environment that incorporates multiple pieces and types of equipment, while others prefer the ease of intuitive programming and operation.
We believe that different people involved with robots define ease of use in different ways.
DENSO Robotics products continue to evolve day in and day out so that we can better meet the needs of a larger range of customers.
Our new RC9 robot controller makes possible integrated control of equipment by providing openness for integration of the user, system integrator, and manufacturer technologies along with expandability for simple integration of entire systems.
In addition, we're developing artificial intelligence technologies that deliver simplicity while enhancing our software, robot functionality, and support structures.
Going forward, DENSO Robotics will supply ease of use to everyone who's involved with robots through an extensive range of products and support across the board, including in design, setup, operation, and maintenance.

5- AND 6-AXIS ROBOTS

VP Series RC8A

VP-5243 / 6242

Maximum arm reach	430 / 432 mm
Maximum payload	3 *1 / 2.5 *2 kg
Position repeatability *3	±0.02 mm
Options	● Standard type

VS Series RC8A

VS050 / 060

Maximum arm reach	505 / 605 mm
Maximum payload	4 kg
Position repeatability *3	±0.02 mm
Options	● Standard type ● Protected type (IP67) ● Dust & splash proof type (wrist: IP65 / unit: IP54) ● Cleanroom type (ISO Class 3/5) ● UL specifications

VS068 / 087

Maximum arm reach	710 / 905 mm
Maximum payload	7 kg
Position repeatability *3	±0.02 to ±0.03 mm
Options	● Standard type ● Protected type (IP67) ● Dust & splash proof type (wrist: IP65 / unit: IP54) ● Cleanroom type (ISO Class 3/5) ● UL specifications

VS-6556 / 6577

Maximum arm reach	653 / 854 mm
Maximum payload	7 kg *5
Position repeatability *3	±0.02 to ±0.03 mm
Options	● Standard type ● Dust & splash proof type (wrist: IP65 / unit: IP54) ● Cleanroom type (Class 10/100)

4-AXIS ROBOTS

HSR® Series RC8A

HSR®048 / 055 / 065

Arm reach	480 / 550 / 650 mm
Vertical stroke	100 / 200 / 320 / 510 mm *7
Maximum payload	8 kg
Position repeatability *3	±0.01 to ±0.012 mm
Standard cycle time *4	0.28 to 0.31 sec (for 2 kg payload)
Options	● Standard type ● Bellows type ● Dust & splash proof type (IP65) ● Cleanroom type (ISO Class 3) *8 ● UL specifications ● Ceiling type ● H1 grease type (IP65)

HS-A1 Series RC8A

HS035A1 / 045A1 / 055A1

Arm reach	350 / 450 / 550 mm
Vertical stroke	100 / 150 / 200 / 320 mm
Maximum payload	5 kg
Position repeatability *3	±0.01 mm
Standard cycle time *4	0.29 sec (for 2 kg payload)
Options	● Standard type ● Bellows type ● Dust & splash proof type (IP65) ● Cleanroom type (ISO Class 3) *8 ● UL specifications *8 ● Ceiling type

HM Series RC8A

HM-40∗∗∗ / 4A∗∗∗

Arm reach	600 / 700 / 850 / 1,000 mm
Vertical stroke	100 / 150 / 200 / 300 / 400 mm
Maximum payload	10 / 20 kg
Position repeatability *3	±0.02 to ±0.025 mm
Standard cycle time *4	0.29 to 0.31 sec (for 2 kg payload)
Options	● Standard type ● Dust & splash proof type (IP65) ● Cleanroom type (ISO Class 5) ● UL specifications *9 ● Ceiling type

LPH Series RC8A

LPH-040

Arm reach	400 mm
Vertical stroke	150 mm
Maximum payload	3 kg (for 2 kg payload)
Position repeatability *3	±0.02 mm
Standard cycle time *4	0.45 sec
Options	● Standard type

*1: If wrist downward movement exceeds ±45°, the maximum payload is 2.5 kg. *2: If wrist downward movement exceeds ±45°, the maximum payload is 2 kg.
*3: Position repeatability (center of end-effector mounting face) is the precision at constant ambient temperature. *4: One cycle is the time taken to move an object at a height of 25 mm between two points 300 mm apart.

PHARMACEUTICAL/MEDICAL ROBOTS

VM Series RC8A

VM-6083 / 60B1

1,021 / 1,298 mm	
13 kg *6	
±0.05 to ±0.07 mm	
● Standard type ● Dust & splash proof type (wrist: IP65 / unit: IP54) ● Cleanroom type (Class 100)	

VMB Series RC9

VMB-2515 / 2518

1,506 / 1,804 mm	
25 kg	
±0.05 mm	
● Standard type ● Protected type ● Cleanroom type	

VLA Series RC9

VLA-4025 / 6022

2,503 / 2,257 mm	
40 / 60 kg	
±0.06 mm	
● Protected type (wrist: IP67 / unit: IP65)	

VS Series RC8A

VS050S2

Maximum arm reach	520 mm
Maximum payload	4 kg
Position repeatability *3	±0.02 mm
Standard cycle time *4	0.35 sec (for 1 kg payload)
Options	● H_2O_2-resistant ● UL specifications

COLLABORATIVE ROBOTS

COBOTTA®

CVR038

Total arm length (No. 1 arm + No. 2 arm)	342. 5 (165 + 177.5) mm
Rated payload (Maximum payload)	0.5 kg *10 *Without electric gripper
Position repeatability *3	±0.05 mm
Options	● Standard type ● OSS version

COBOTTA® PRO CRC9

CVRB-0609/1213

Maximum arm reach	1,066 / 1,463 mm
Maximum payload	6 / 12 kg
Position repeatability (*3)	±0.03 to ±0.04 mm
Options	● Dust & splash proof type (IP54) ● Cleanroom type (ISO Class 5)

GANTRY ROBOTS

XR Series RC8A

XR-43***

Arm reach	200 / 250 / 300 mm
X-axis stroke	450 / 760 / 1,060 mm
Maximum payload	5 kg
Position repeatability *3	±0.015 mm
Standard cycle time *4	0.56 sec (for 3 kg payload)
Options	● Standard type

INTER-PROCESS TRANSFER ROBOTS

SC Series RC8A

SCL***

1-axis stroke	600 to 12,000 mm
2-axis stroke	100 / 200 / 300 / 400 mm
3-axis stroke	100 / 200 / 300 / 400 mm
4-axis stroke	100 / 200 / 300 / 400 mm
Maximum payload	3 kg/S *11, 5 kg/Z
Position repeatability *3	±0.02 to ±0.05 mm
Options	● Standard type

*5: If wrist downward movement exceeds ±45°, the maximum payload is 6 kg. *6: If the payload exceeds 11 kg, flange downward movement is limited to ±10°.
*7: Standard type vertical stroke *8: Floor type only *9: Standard type/dust and splash proof type *10: 0.7 kg within ±10° with the wrist angled downward *11: With S stroke of 400, 2 kg/S

Collaborative robot

COBOTTA® PRO

A high-speed collaborative robot with both high productivity and safety

ID 1111271092

Type Approved
Safety
Regular Production
Surveillance
www.tuv.com
ID 1111271093

COBOTTA PRO is certified by third party certification bodies to the standards including EN ISO 10218-1:2011, ISO/TS 15066:2016, and EN ISO 13849-1:2015.

Top-class speed

Operating speed table

Touch sensing soft cover	Collaborative operation		Non-Collaborative operation (High-speed)
	Clamping*1	Contact*2	
Without	200 mm/s	1,800 mm/s	2,500 mm/s
With	500 mm/s	2,000 mm/s	

*1 Definition of clamping
A contact where the body part is clamped and cannot recoil or retract

*2 Definition of contact
A contact where the body part is not clamped and can recoil or retract

*The table shows the figures for COBOTTA PRO 1300.

*In accordance with ISO/TS15066, the table indicates the speed at which the robot can stop without applying more than 280 N of force in the event of clamping or contact.

Improved productivity through switching between high-speed and collaborative operations

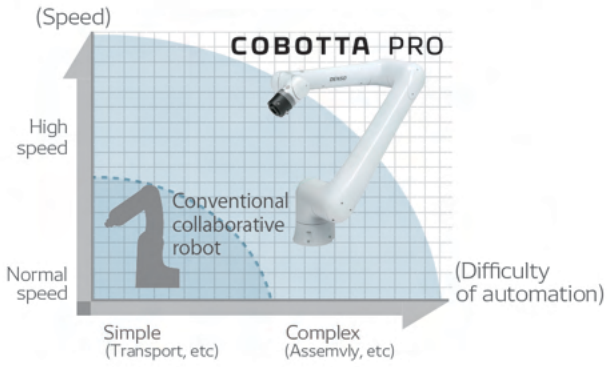
COBOTTA PRO slows down when an operator approaches it and speeds up when the person moves away. By switching the operating speeds according to the situation, a streamlined automated process can be achieved.

*Requires safety sensors that detect an operator (sold separately).

Improved productivity through high-speed collaborative operation

COBOTTA PRO is engineered to operate at high speeds and perform highly difficult tasks through integrated control, enabling the automation of complex processes such as assembly and inspections.

Increased potential of automation through the combination of high-speed operation and integrated control of the robot cell/system



Technologies enabling high-speed collaborative operation

Proprietary, high-output motor module with a lightweight,high-rigidity embedded torque sensor * Patent applied for

Our newly developed high-output motor module has a super-lightweight,high-rigidity embedded torque sensor that can measure torque highly accurately even during high-speed operation. It allows COBOTTA PRO to be one of the fastest collaborative robots that can operate fast and accelerate/decelerate quickly.

Extensive internal wiring

Air piping, Ethernet, and signal wires are installed inside the slim arm, all the way up to the flange on its end. This reduces the risk of wiring breaks.

Safety that maximizes productivity

Scene function

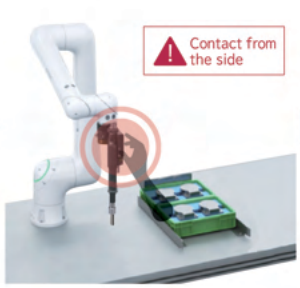
The following description uses a bolt-tightening process as an example. When tightening a bolt, a reaction force is generated, and the robot would stop by that force exceeding the set force value of a safety function. Now the collaborative operation can not continue, and this poses issues, including increased cost due to the need to install a safety fence and losses and inconvenience caused by robot stoppages. The scene function eliminates these issues by making it possible to switch parameters in a robot program according to the situation. The space set by the scene function (robot motion space) is guaranteed by a PL d, Category 3 safety performance.

Scene 1 Picking up a bolt

Monitored speed	125 mm/s
Monitored force	50 N

The operator's hand could get caught between the end point and equipment, so configure parameters with the limited speeds and forces to maintain safety.

Scene 2 Move the bolt above



Monitored speed	1,800 mm/s
Monitored force	150 N

Here is a risk of contacting the side of the robot. However, there are no sharp points, so the allowable speed and force can increase during collaborative operation.

Scene 3 Approach the workpiece

Monitored speed	125 mm/s
Monitored force	50 N

The operator's hand could contact the end point, so change to the reduced speed and force to maintain safety.

Scene 4 Tighten the bolt

Monitored speed	250 mm/s
Monitored force	500 N

Here there is no risk of the operator's hand getting caught, the force parameter is greater than the tightening reaction and can be configured so that this robot can continue the collaborative operation.

* Monitored force and speed values are merely examples.
* Additional safety measures may be required after a risk assessment.

COBOTTA® PRO

CVRB-0609/1213

Supported robot controllers
CRC9 ▶P.46

COBOTTA PRO is designed not only to collaborate with an operator but also to consistently improve productivity.
It delivers both productivity and safety for not only simple tasks but also multi-process tasks such as assembly and inspections.

Maximum arm reach	1,066 mm / 1,463 mm
Maximum payload	6 kg / 12 kg
Position repeatability	In each of X, Y and Z directions:±0.03 / ±0.04

Specifications

Item		Unit	Specifications	
Product name		-	COBOTTA PRO 900	COBOTTA PRO 1300
Number of axes		-	6	
Position detection		-	Absolute encoder	
Drive motor		-	AC servo motors for all axes	
Brake		-	Brakes for all axes	
Maximum motion area (Point P:4th, 5th, 6th axis center)		mm	908	1,304
Overall arm length (1st arm + 2nd arm)		mm	900	1,300
Maximum arm reach		mm	1,066	1,463
Maximum motion angle	1st axis	deg	±270	±270
	2nd axis		±150	±150
	3rd axis		±150	±150
	4th axis		±270	±270
	5th axis		±150	±150
	6th axis		±360	±360
Maximum payload		kg	6	12
Maximum speed in a Collaborative State	Without touch sensing soft cover	mm/s	1,800	
	With touch sensing soft cover*1		2,000	
Maximum TCP translational speed in a Non-Collaborative State		mm/s	2,100	2,500
Position repeatability (at the center of a tool mounting face)*2		mm	In each of X, Y and Z directions:±0.03	In each of X, Y and Z directions:±0.04
Maximum allowable moment	Around 4th axis	Nm	20	38.5
	Around 5th axis		14.6	28
	Around 6th axis		6.5	12
Maximum allowable moment of inertia	Around 4th axis	kgm²	0.8	1.45
	Around 5th axis		0.45	0.9
	Around 6th axis		0.1	0.35
Connector panel mounting position		-	Back side of the robot base (Bottom side of the robot base is optional)	
Equipment for Tool		-	Signal line:2 pins (for Air Piping type), 8 pins (for Through Wiring type)*3 Ethernet cable:1 cable (8 pins)*4 Analog input:2 systems / RS-485:1 system Hand input:5 pins / Hand output:5 pins Lighting:1 system Power source + (switching between OFF, 12 V and 24 V), Power source - (0 V)	
Air piping		-	Φ4 x 2 (for Air Piping type)	
Air source	Operating pressure	MPa	0 to 0.39	
	Maximum allowable pressure		0.49	
Degree of protection		-	IP54 (Dust-& splash-proof type)	
Cleanliness classification (ISO 14644-1)		-	Class 5 (Clean type)	
Environment Conditions of Installation Site (During operation)	Without touch sensing soft cover With touch sensing soft cover*1	-	Ambient temperature:0 to 50℃ Ambient temperature:5 to 45℃ Relative humidity:20 to 90% (No dew condensation allowed.) Vibration:4.9 m/s² (0.5 G) or less	
Noise (Equivalent continuous A-weighted sound pressure level)		dB	65 or less	
Pollution degree (IEC 60664-1)		-	3	
Weight	Without touch sensing soft cover	kg	Approx. 29	Approx. 41
	With touch sensing soft cover (Full set)*1		Approx. 35	Approx. 50
	With touch sensing soft cover (Half set)*1		Approx. 32	Approx. 45
Applicable standards		-	ISO 10218-1:2011, ISO 13849-1:2015, ISO/TS 15066:2016, IEC 60204-1:2016/A1:2021, EN 61000-6-2:2005, EN 61000-6-4:2007/A1:2011, EN 61000-6-7:2015	

*1: Optional.
*2: The precision can be achieved when the robot is used at a constant ambient temperature.
*3: Select either Air Piping type or Through Wiring type
*4: The Ethernet cable connected to the connector panel is 20 m long or less.

Options

Touch sensing soft cover

This cover can detects and stop the robot motion using a two-layer design consisting of soft, cushioning silicon and high-sensitivity built-in sensors. It increases the maximum collaborative speed to improve productivity. Two models of covers are available: the cover for the robot arm and the cover for an end-effector, each of which is available in two types. Choose depending on the intended use.

Changes in speed when using the touch sensing soft cover *With COBOTTA PRO 1300

Touch sensing soft cover	Collaborative operation		Non-Collaborative operation (High-speed)
	Clamping*1	Contact*2	
Without	200 mm/s	1,800 mm/s	2,500 mm/s
	2.5×	1.1×	
With	500 mm/s	2,000 mm/s	

*1 "Clamping" refers to a contact where the body part is clamped and cannot recoil or retract.
*2 "Contact" refers to a contact where the body part is not clamped and can recoil or retract.
*In accordance with ISO/TS15066, the table indicates the speed at which the robot can stop without applying more than 280 N of force in the event of clamping or contact.

	Full set	Half set	End effector cover

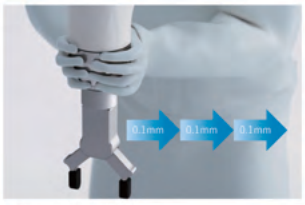
Weight	For COBOTTA PRO 900:Approx. 6 kg For COBOTTA PRO 1300:Approx. 9 kg	For COBOTTA PRO 900:Approx. 3 kg For COBOTTA PRO 1300:Approx. 4 kg	Small:240 g Large:450 g Attachment for flange:200 g *Require to prepare parts for mounting the covers on the end effector by the customer.
Dimensions	-	-	Small:80 × 160 mm Large:160 × 160 mm
Detection time	5 ms or less		
Detected force	10 N or more		
Operating environment temperature	5 °C to 45 °C		
Operating environment humidity	20 % to 80 % RH (non-condensing)		
Environmental resistance	IP54 *Avoid use in environments where the product would be exposed to oil or chemical substances.		
Safety performance	PL d, Cat. 3		
Certified standard compliance	EN ISO 13849-1:2015, EN ISO 13856-3:2013		

*Use of the full set requires an external battery unit (purchased separately).
*The full set and half set covers are shipped mounted on the robot. For mounting after delivery, our service engineers will visit the customer's site and mount them. Please contact a service facility for more information.
*For end effector covers, please choose the necessary number of covers based on the hand in use. (Due to serial connections, the last cover must be an End Cover.)
*Touch sensing soft cover (except for the ones for end-effector) is certified by third party certification bodies if mounted on the robot.

Fine direct teaching



Inching function
Moves the arm at a minimum unit of 0.1 mm. This capability allows you to perform teaching for tasks requiring accuracy, such as mating and inserting parts, with direct teaching alone.

Significant reduction in teaching work
Combining out-of-the-box and optional functions lets you quickly automate processes intuitively without sacrificing continuity.

Plane alignment function
The plane alignment function allows the robot to automatically move vertically to a specified plane. It simplifies setting up three dimensional diagonal movements, helping reduce man-hours.

Easy block programming

Intuitive programming using blocks
This approach makes intuitive programming possible. The method can also accommodate complex processes thanks to the ability to set exact values on a property screen.

Simple drag-and-drop operation
A simple operation that only requires connecting available blocks prevents syntax errors. This approach reduces man-hours that would otherwise be spent on correcting mistakes and fine-tuning code.

Obvious original icons
Original icons make it easy to visually identify operations, allowing even beginners to create programs quickly.
*Figure illustrates an example screen.

Anywhere, anytime, hassle-free.
A robot that collaborates with everyone.

The human-friendly, compact, and portable design
allows you to take COBOTTA anywhere, and automate tasks right away.

1 safety design

Safe shape and movement

2 portable body

Transportable immediately to sites with staff shortages

3 easy to use

Simple teaching with no memorization

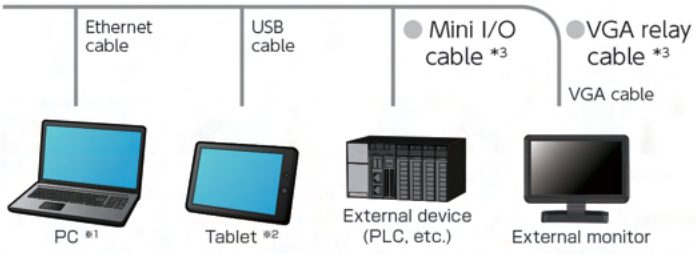
4 open platform

Infinite possibilities

- Camera Built-in Set
  - ·AF Camera (N10-W02)
  - ·End-effector Ethernet Cable
  - ·Camera Stay
- Electric Gripper
- Base Plate

- Electric Vacuum

- Field Network Interface Module



*1: OS: Windows *2: OS: Android, 8" or larger screen recommended. *3: Option(s) required.

Choose according to your application. teaching & operating software

Easy start method

Cobotta World

COBOTTA World is an application that runs on an Android tablet. Using this application, you can program the robot to perform a simple task such as picking and placing by simply moving items or operating the COBOTTA robot according to the guidance instruction.

WINCAPS III & TP App *1

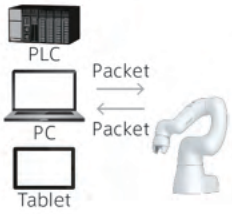
WINCAPS III is a programming application that runs on a Windows PC. It allows for easy editing and management of data of multiple units of COBOTTA. TP App is used to operate the COBOTTA robot or perform position teaching.

PC application to control the robot

For Windows OS

Use of ORiN2 SDK

By installing the middleware, ORiN2 SDK, in the PC, COBOTTA can be controlled with a development tool that supports OLE (COM, Active X), such as Visual Basic, C++, or LabVIEW.



For OS other than Windows OS

Use of b-CAP communication *2

When Linux, iOS, or Android is used, COBOTTA can be controlled by transmitting and receiving b-CAP packets.

ROS

Use of an external PC installed with ROS

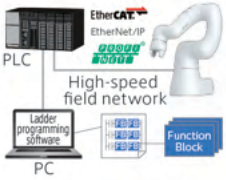
By installing a ROS package from GitHub to an external PC, COBOTTA can be controlled using b-CAP communication (transmission of b-CAP packets).

Use of COBOTTA OSS version

The COBOTTA OSS version enables the COBOTTA unit as a PC. Simply install Linux and ROS in the COBOTTA unit for its control.

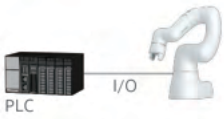
QR code to download the COBOTTA driver for Linux

PLC for the control



Use of Command Slave function

Connect the PLC to COBOTTA using a high-speed field network. COBOTTA can be controlled by the PLC language (ladder program).



Directly controlling from PLC

Like other DENSO robotics products, COBOTTA can be controlled directly by PLC inputs and outputs.

*1: TP App comes in two types. Remote TP for Android tablet and Virtual TP for Windows PC.
*2:b-CAP is a protocol which is created by following the concept of CAP, whose specifications are stipulated by ORiN, to improve communication speed.
[Notes] This product is an industrial robot capable of operating in collaboration with human beings. Before using the product, be sure to conduct risk assessment in accordance with the applicable law, regulations, notices, guidance, JIS B 9700:2013, etc., and reduce risk as much as possible. In addition, the user should check compliance with laws, ordinances and standards pertaining to the operating environment.

Hand tools

Two types of hand tools are available.*1
You can also fabricate your own hand tool for use with COBOTTA

Electric Gripper

This hand tool is ideal for the basic operations of gripping and releasing.

Electric Vacuum Generator

This tool makes it easy to pick up items via suction without providing an external air compressor.

Other options

Base Plate Set *3

This baseplate allows COBOTTA to operate in a freestanding orientation so that the robot doesn't need to be mounted.

Field Network Interface Module

Use EtherCAT, Ethernet/IP, and PROFINET.

Camera

By attaching a camera designed specifically for use with COBOTTA to the robot's wrist, you can perform work while detecting the position of target objects. Use the factory default calibration to get started quickly without a timely initial setup process.

Camera Built-in Set *2

AF Camera (N10-W02)

This AF camera sets the optimal exposure automatically and eliminates the need to focus manually.

Third-party products
Explore how to broaden COBOTTA's utility.

*1: Specify at time of order. *2: To use the camera, supply PoE to the hub. The set includes an end-effector Ethernet cable and camera stay.

COBOTTA®

CVR038

Anywhere, anytime, hassle-free.
A robot that collaborates with everyone.
The human-friendly, compact, and portable design allows you to take COBOTTA anywhere, and automate tasks right away.

Maximum arm reach	342.5 mm
Rated payload	0.5 kg *2
Position repeatability	±0.05 mm

[Notes] This product is an industrial robot capable of operating in collaboration with human beings. Before using the product, be sure to conduct risk assessment in accordance with the applicable law, regulations, notices, guidance, JIS B 9700:2013, etc., and reduce risk as much as possible. In addition, the user should check compliance with laws, ordinances and standards pertaining to the operating environment.

Patent No. 6365113
Design registration No. 1583755 / No. 1583756 / No. 1583757 / No. 1583758

COBOTTA®

Specifications

Item	Specifications
Axes	6th axis (arm unit) + 1st axis (electric gripper unit) *1
Brake	1, 2, 3, 4 and 5 axes with brakes
Total arm length (No. 1 arm + No. 2 arm)	342.5 (165 + 177.5) mm
Rated payload (Maximum payload)	0.5 kg (0.7 kg within ±10° with the wrist angled downward) *2
Maximum allowable moment of inertia	J4: 0.0065 kgm² J5: 0.0040 kgm² J6: 0.00025 kgm²
Position repeatability	±0.05 mm *3
Standard cycle time	4.32 sec in the factory configuration, 1.6 sec when set to maximum speed (Reciprocating movement time for 200 mm in the horizontal direction and 25 mm in the vertical direction)
Protection grade	COBOTTA main unit: IP30, AC adapter, AC cable: IP20
Software	Standard version: COBOTTA-dedicated software, OSS version: None (*Linux, etc. may be installed by the customer.)
Power supply specification (AC adapter)	Input: Single phase 100 - 240 V AC ±10%/ 47 - 63 Hz
External signal	System input: 12 pins / System output: 11 pins User input: 8 pins / User output: 9 pins External emergency stop connection × 1 ch
External communication	Ethernet x 1 line, USB x 2 lines, VGA output x 1 ch
Environmental conditions (during operation)	Temperature: 0 - 40°C / Humidity: 20 - 80 %RH (no condensation allowed)
Unit weight	Approx. 4 kg
Safety specifications	Standard version: ISO 10218-1:2011 ISO / TS 15066:2016 ISO 13849-1:2015 PL d Cat.3 OSS version: ISO 13849-1:2015 PL d Cat.3

*1. Options *2. Without electric gripper *3. At fixed ambient temperature

System configuration

- AC adapter
- AC cable *1
- Dummy connector (I/O) *2
- Emergency stop box
- Manual disc
- Software DVD for COBOTTA *3, 4

*1: Select based on type of power outlet in country where robot will be used.
*2: When not using the optional mini I/O cable.
*3: Install on tablet or PC.
*4: Android app can also be downloaded from Google Play.

Overhaul

Inspection is required every 5 years to maintain the safety and performance necessary for a collaborative robot. Parts may need to be replaced, depending on the inspection results.

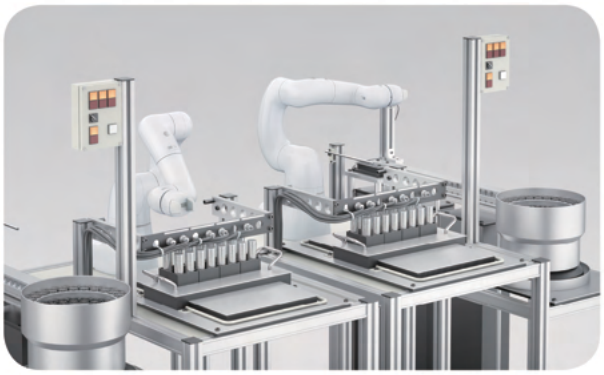
Case studies

Understanding issues and ideas.



Industry | Placing and arranging parts in rows

(Courtesy of Toyota Motor Corporation)

COBOTTA recognizes the front and back side of parts fed from a parts feeder and positions them in the correct orientation. COBOTTA releases the worker from a process with a workload not enough for one worker.

Industry | Sorting parts, operating tablet, and inspecting substrate

(Courtesy of Canon Inc.)

COBOTTA utilizes a camera and image processing software to automate simple and repetitive work that requires visual confirmation. COBOTTA can perform a multi-movement processing job in a limited space.

Industry | Packing teabags in a box using AI vision

(Courtesy of Innotech Corporation and OSARO Inc.)

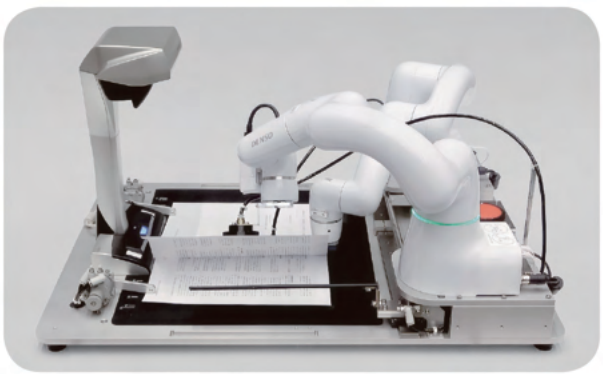
COBOTTA can automate a process of picking transparent, lustrous or irregularly shaped items and image recognition by utilizing AI vision. COBOTTA can perform packing work in a limited space.

Laboratory | Chemical analysis

COBOTTA can automate a variety of work involved in chemical analysis, such as solution filtration, constant volume measurement, agitation and beaker washing. COBOTTA releases researchers from simple work in a laboratory.

Academic | Serving as a programming learning tool

COBOTTA OSS version enables development activities in an ROS or LabVIEW environment, thus allowing for its use in education and training.



Office | RPA&COBOTTA® office automation support

(Developed jointly with Mitsubishi HC Capital Inc. and Hitachi Systems, Ltd.)

RPA&COBOTTA® automates a series of tasks, such as placement of seal stamps and conversion of paper documents to digital data. It can combine with RPA tools to improve office efficiency and reduce workloads.

5- AND 6-AXIS ROBOTS
5- AND 6-AXIS ROBOTS

The VP, VS, and VM series of slim-body robots broaden freedom of design.
The VMB and VLA series provide high payloads and long arm reach.
Thanks to their extensive range of products, these lines make it possible to automate entire manufacturing processes.

*1: One cycle is the time taken to move an object at a height of 25 mm between two points 300 mm apart.
*2: Position repeatability (center of end-effector mounting surface) is the precision at constant ambient temperature.
*3: If wrist downward movement exceeds ±45°, the maximum payload is 2.5 kg. *4: If wrist downward movement exceeds ±45°, the maximum payload is 2 kg.
*5: If wrist downward movement exceeds ±45°, the maximum payload is 6 kg. *6: If the payload exceeds 11 kg, flange downward movement is limited to ±10°
*7: Standard: J2 - J4 with brakes / With brakes: J2 - J6 with brakes *8: J2 - J6 with brakes

Robot list

Standard type

This type is used in standard environments.

Protected type (IP67)

Usable in places requiring environmental resistance and suitable for work in the environments where equipment might be exposed to water (equivalent to IP67).

Dust & splash proof type (wrist: IP65 / unit: IP54)

Suitable for the work environments where equipment may be exposed to dust or water droplets, and the wrist has the dust & splash proof performance of IP65, while the body, IP54.
Also usable in the vicinity of the processing machine, where equipment might be exposed to oil or mist.

Cleanroom type

Specification best suitable for automated and energy-saving production system in clean room, and ideal for electronic parts, food, and medical device-related work in clean room to realize the dust proof by highly-sealed structure as well as high cleanliness and high performance.

UL specifications

UL/cUL certified products.

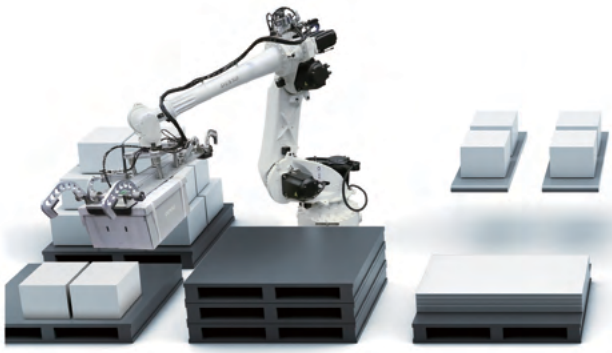
H_2O_2-resistant

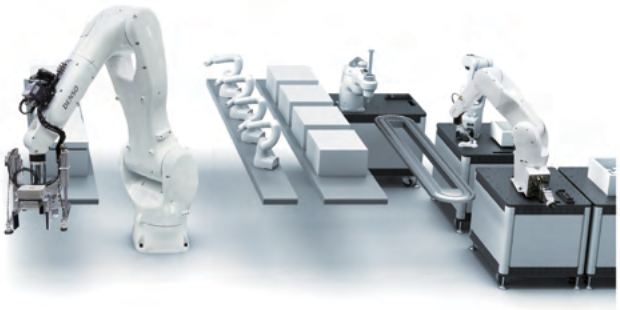
Robot with sterility control for use in sterile environments and clean environments that employ H_2O_2 gas 35% density (dry/wet) and UV exposure.

5- AND 6-AXIS ROBOTS

VLA/VMB Series

These high-payload, long-arm-reach models are ideally suited to transport and palletizing work.





VLA-4025 / 6022

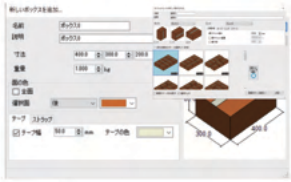
Features

Resist with adverse environments

These robots have an IP67* protection rating, helping to facilitate automation in harsh environments where oil and mist can splash.

*Wrist: IP67-compliant, main unit: IP65-compliant

Ideal for transporting and palletizing heavy loads



The robots in the VLA series have the largest payload and arm length of any DENSO robot, making them ideal for automating heavy load transfer and palletizing operations. When combined with "Palletizing Builder," which is an option with WINCAPS Plus Offline Programming software suite, the palletizing process can be automated without coding.

Built-in field network

The field network is wired inside the robot, reducing the complexity of the external wiring.
Compatible communication standards: PROFINET, PROFIBUS, DeviceNet

Options

Multibus cable
Field networks such as DeviceNet are wired inside the robot, reducing the complexity of external wiring.

Level-adjustable plate kit for fixing robot

Attachment for forklifts

Adjustable mechanical stopper kit for 1st axis (VL)

Protection cover for connector panel

Non adjustable leveling plate for fixing robot

VMB-2515 / 2518

Features

High acceleration performance for high-speed motion

Although these are high-payload robots, their high acceleration and deceleration performance enable high-speed motion. They shorten the cycle times of various processes that require high productivity.

Used in contaminate-critical environments

In addition to the standard specifications, the lineup includes robots that comply with dust and splash resistance (IP67) and cleanliness standards (ISO class 5). They can be used to automate processes in a variety of industries, from automotive parts manufacturing and electrical/electronic parts to food, pharmaceutical, and medical equipment manufacturing processes.

Full-cover structure

Internal EtherCAT wiring for flexible hand design

A wide variety of devices and hands can be mounted on the robot flange with options for user wiring, piping, and solenoid valves. The 2nd arm user wiring allows up to two EtherCAT lines to be wired internally. The 3-axis wiring option prevents tangling and wear on the external wiring/piping.

2nd arm
User wiring option

3-axis wiring option

Options

External battery extension unit

Level-adjustable plate kit for fixing robot

Attachment for forklifts

Brake release unit

Non adjustable leveling plate for fixing robot

Adjustable mechanical stopper kit for 1st axis

VLA Series

Supported robot controllers
RC9 ▶P.44

VLA-4025 / 6022

With a maximum payload of 60 kg and arm reach of 2,503 mm, these models can be used in processes such as palletizing, inspection, loading, transport, and packaging.

Maximum arm reach	2,503 / 2,257 mm
Maximum payload	40 / 60 kg

Specifications

item		Specification	
Model		VLA-4025	VLA-6022
Axes		6	
Position detection system		Absolute Encoder	
Drive motor/brake		All axes AC servo motor/All axes with brake	
Total arm length (Arm 1 + Arm 2)		2085.5(860+1225.5) mm	1835.5(860+975.5) mm
Maximum operating area		2503 mm (Point P: 4th, 5th, 6th axis center)	2257 mm (Point P: 4th, 5th, 6th axis center)
Operating angle	1st axis	-180° ~ 180°*1	
	2nd axis	-60° ~ 125°	
	3rd axis	-160° ~ 0°	
	4th axis	-2700° ~ 2700°*4	
	5th axis	-123° ~ 123°	
	6th axis	-2700° ~ 2700°*4	
Maximum payload		40kg	60kg
Position repeatability (at the center of an end-effector mounting face)*2		In each of X, Y and Z directions: ±0.06 mm	
Maximum allowable moment	Around 4th	167 N·m	221 N·m
	Around 5th	167 N·m	221 N·m
	Around 6th	98 N·m	118 N·m
Air piping		1 system (inner diameter: ϕ12.5)	
Signal line		14-core (19-core connector)	
		15-core (17-core connector)*3	
Air source	Allowable maximum pressure	2.0 MPa	
Noise (Equivalent continuous A-weighted sound pressure level)		75 dB	
Protection class		Main unit: IP65 / Wrist: IP67	
Weight		Approx. 655 kg	Approx. 645 kg

*1 : The operating angle is limited when the robot is installed at an angle. *2 : Position repeatability is the accuracy at constant ambient temperature.
*3 : Can be used as PROFIBUS / PROFINET / DeviceNet using wiring. *4: 800(±400) at the factory default settings.

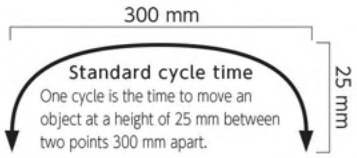
5- AND 6-AXIS ROBOTS

VS Series

VS050 / 060 / 068 / 087

Boasts top-performing speed in its class to greatly improve productivity. Slim arm of wide movable range enables various types of robot layouts.

Maximum arm reach	505 / 605 / 710 / 905 mm
Maximum payload	4 / 4 / 7 / 7 kg
Standard cycle time	0.35 / 0.35 / 0.31 / 0.34 sec
Position repeatability	±0.02 / 0.02 / 0.02 / 0.03 mm



VS060

VS087

Specifications

Item		Specifications			
Model		VS050	VS060	VS068	VS087
Axes		6			
Position detection method		Absolute encoder			
Drive motor / brake		All-axis AC servo motor / all-axis brake with brakes			
Total arm length (No. 1 arm + No. 2 arm)		505 (250 + 255) mm	605 (305 + 300) mm	680 (340 + 340) mm	875 (445 + 430) mm
Maximum motion area (Point P)		505 mm	605 mm	710 mm	905 mm
Motion range	1st axis	±170° *5			
	2nd axis	±120°		+135°, −100°	
	3rd axis	+151°, −120°	+155°, −125°	+153°, −120°	+153°, −136°
	4th axis	±270°			
	5th axis	±120° *6		±120°	
	6th axis	±360°			
Maximum payload		4 kg		7 kg	
Maximum joint speed	1st axis	425 deg/sec		356.25 deg/sec	285 deg/sec
	2nd axis	340 deg/sec	283.33 deg/sec	303 deg/sec	252.5 deg/sec
	3rd axis	385.72 deg/sec	309.35 deg/sec	378.75 deg/sec	303 deg/sec
	4th axis	425 deg/sec		475 deg/sec	378.75 deg/sec
	5th axis	327.01 deg/sec		475 deg/sec	378.75 deg/sec
	6th axis	680 deg/sec		760 deg/sec	606 deg/sec
Standard cycle time *1		0.35 sec		0.31 sec	0.34 sec
Position repeatability (at the center of a tool mounting face) *2		±0.02 mm			±0.03 mm
Maximum allowable moment of inertia	4th axis, 5th axis	0.2 kgm²		0.45 kgm²	
	6th axis	0.05 kgm²		0.1 kgm²	
Maximum allowable moment	4th axis, 5th axis	6.66 Nm		16.2 Nm	
	6th axis	3.13 Nm		6.86 Nm	
Signal lines / Air pipe solenoid valve (option)	Signal lines	10 (for proximity sensor signals, etc.) *7,8			
	Air pipe solenoid valve	5 systems (ø4 × 4, ø4 × 1)*3 2 × solenoid valves (2 position, double solenoid) Cleanroom type has 4 systems (ø4 x 4).		7 systems (ø4 × 6, ø6 × 1) *4 [solenoid valves can be selected from 1 to 3] 1. 3 × solenoid valves (2 position, double solenoid) 2. 3 × solenoid valves (3 position, exhaust center solenoid) 3. 3 × solenoid valves (3 position, closed center solenoid) Cleanroom type has 6 systems (ø4 x 6).	
Communication interface flange-A (option) *Standard type only		17 (power wire for cameras, etc.) *8			
		LAN×1 (1000BASE-T) *9			
Air source	Normal pressure	0.20 to 0.39 MPa			
	Maximum allowable pressure	0.49 MPa			
Airborne noise (equivalent continuous A-weighted sound pressure level)		65 dB or less			
Protection grade		Protected type: IP67 *10 (option) Dust & splash proof type: wrist IP65 / unit IP54 (option) Cleanroom type: ISO class 3 / 5 (option)			
Weight		Approx. 27 kg	Approx. 28 kg	Approx. 49 kg	Approx. 51 kg

*1: Time required for a robot to move a 1 kg payload between two points 300 mm apart at a height of 25 mm. *2: Position repeatability is the precision at constant ambient temperature.
*3: Controllable by use of the embedded solenoid valve only for ø4×4. *4: Controllable by use of the embedded solenoid valve only for ø4×6. *5: Limited motion range when wall mounted. For details, please contact our sales representative.
*6: When communication interface flange-A is selected, the motion range of J5 is +120° and -110°. *7: There are 4 of these lines (for proximity sensor signals, etc.) when selected together with communication interface flange-A.
*8: Allowable current is limited. *9: The LAN cable to connect to the connector panel is 20 m or shorter.
*10: The robot interior is air-pressurized to maintain protective class IP67. Use the air-purge unit to remove air. Do not use the robot underwater.

Options

Connector panel

Rear connector panel　Bottom connector panel

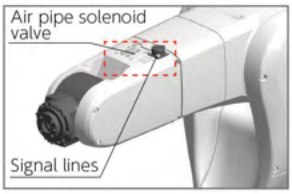
Choose from two mounting orientations when connecting cables (main unit connecting cable, etc.) to the robot for increased flexibility to accommodate the robot installation conditions.

Flange

Communication interface flange-A

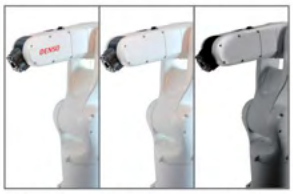
The flange has connectors for electrical signal lines and EtherNet, allowing wiring to be embedded in the robot unit.

Signal lines / Air pipe solenoid valve



Signal lines and air pipe solenoid valves are embedded in the top of the second arm. Three varieties are available for VS068 / 087 and one for VS050 / 060.

Paint / Surface finish



Standard type　Cleanroom, IP54　IP67

If the protected type (IP67) is selected, the unit is left as aluminum.
Standard paint is available in the special specification (option) when selecting IP67.

User options

External battery extension unit

Encoder backup battery installed outside the robot. Facilitates replacement of batteries and improves maintainability.

Brake release unit

A switch that allows you to release the brake of each axis (the wiring of this switch is directly connected to the brake release signal of each axis).

Air purge unit

The protected type (IP67) maintains an IP67 protect grade by air pressure produced inside the robot.

Second arm cover (right-hand, with tapped holes)

This cover has tapped holes to secure wires for the robot's second arm.

*1: The brake release unit provides IP67 and IP54 protection for the connection area and unit, respectively.
*2: This cover is already mounted on the protected type, dust & splash proof type, and cleanroom type when shipped. The cover is an option on the standard type.
*3: An air purge unit is necessary to keep the protection level, IP67.

Noise (A weighed equivalent continuous sound pressure level)		65 dB or less
Environmental resistance	Hydrogen peroxide environment	35% hydrogen peroxide steam (dry / wet)
	Protection grade	Wrist IP67 / Unit IP65
	Cleanliness	ISO Class 5
Weight		Approx. 34 kg

Options

Electric gripper connection flange specification-A

Internal mount with a gripper cable up to the flange. Suitable for clean environments, eliminates interference with peripherals.

External mount battery

Medical and pharmaceutical robot hands (option)

Features

Electric gripper

Electric gripper cover kit

- Sterility resistance: H_2O_2 gas (35% density) and UV exposure compliance
- Cleanliness: ISO class 4 (GMP grade A/B)*
- Made with FDA-certified material

Specifications

Item	Specifications
Grip force	60 N
Open/close stroke	2 × 3 mm
Power supply	24V ±10%
Protection grade	IP65
Cleanliness	ISO Class 4 (GMP Grade A/B)
I/O type	NPN / PNP selection
Unit weight	480 g (Hand unit + cover)*

*The weight does not include the chuck. Prepare the chuck by yourself.

*1: Time required for a robot to move a 1 kg payload between two points 300 mm apart at a height of 25 mm. *2: Position repeatability is the precision at constant ambient temperature.
*3: Limited motion range when wall mounted. For details, please contact our sales representative. *4: When electric gripper connection flange specification-A is selected, the J5 motion range is +110, -102.
*5: This line (for proximity sensor signals, etc.) is 4-core if electric gripper connection flange specification-A is also selected. *6: Allowable current is limited.

4-AXIS ROBOTS
4-AXIS ROBOTS

Standard model "HS-A1" and "HSR" capable of high-speed, high-precision continuous operation. "HM" features outstanding rigidity and transportability.
A wide-ranging lineup is available matched to processes and applications.

Main features

Model		LPH	HSR®			HS-A1			HM *3

*1: One cycle is the time taken to move an object at a height of 25 mm between two points 300 mm apart.
*2: Position repeatability (at the center of a tool mounting face) is the precision at constant ambient temperature.
*3: An asterisk [*] in a model name indicates Z-axis stroke.
*4: The Z-axis strokes of 100 mm, 200 mm, 320 mm and 510 mm are available only with the standard type.The Z-axis stroke values available for the dust and splash proof type, cleanroom type and bellows type are 170 mm, 290 mm and 450 mm. (Cleanroom type not available with 450 mm stroke.)
*5: If the Z-axis stroke required is 100 mm or 150 mm, the dust & splash proof type cannot be selected.
*6: The HSR® series and HS-A1 series are ISO Class 3.
*7: Standard/dust- and splash-proof types
*8: Available Z-axis strokes are 200 mm and 300 mm.

Robot list

Standard type

This is a standard type used in standard environments.

Ceiling type

Ceiling mount structure eliminates a waste of space, minimizes the entire equipment space, and expands the workable space.

Bellows type

The Z-axis shaft of the standard type is mounted with a cover.

Dust & splash proof type (IP65) / H1 grease type

Suitable for the work environments where equipment may be exposed to dust or water droplets, and the dust & splash proof performance of IP65 is provided.
Also usable in the vicinity of the processing machine, where equipment might be exposed to oil or mist.

*The H1 grease type may be selected for the HSR dust and splash-proof type only.

Cleanroom type

Specification best suitable for automated and energy-saving production system in clean room, and ideal for electronic parts, food, and medical device-related work in clean room to realize the dust proof by highly-sealed structure as well as high cleanliness and high performance.

UL specifications

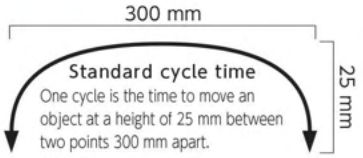
UL/cUL certified products

HSR®Series

HSR®048/055/065

Accelerates quickly, runs continuously at high speed, and stops precisely.
"True high speed" has been realized in pursuit of this ultimate basic performance.

Arm reach	480 / 550 / 650 mm
Z-axis stroke	100 / 200 / 320 / 510 mm
Maximum payload	8 kg
Standard cycle time	0.28 / 0.31 sec
Position repeatability	±0.01 / 0.012 mm



Design registration No. 1558886 / No. 1558887

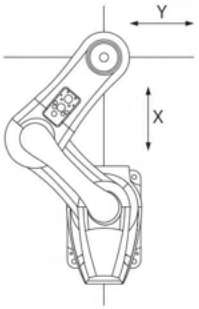
Features

High-speed motion

High acceleration & motion profiles

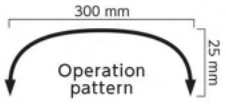
Improved CPM (cycle per minute) enables high-speed and prolonged motion.



cycle/min

HSR065	X-direction	Y-direction
	118	149

For 1 kg payload



*The CPM changes depending on the coordinates.

Continuous motion

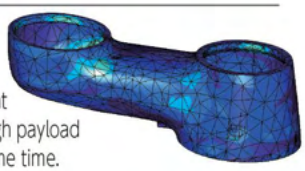
Achieving non-stop continuous motion

Improved heat dissipation performance at the base unit allows the robot to achieve continuous motion over extended periods of time, which is required in actual processes.

Light weight

Newly designed, highly rigid, lightweight arm

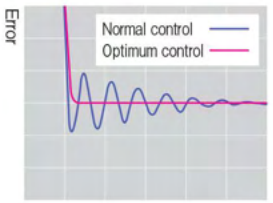
The combination of high rigidity and light weight allows the robot to achieve a high payload (8 kg) and high-speed motion at the same time.



Vibration control

Vibration control technique for suppressing vibrations

The robot can suppress vibrations in a short time by actively reflecting the status of the arm to vibration control. This can suppress vibrations that occur with high-speed transfer and residual vibrations, reducing the cycle time.



RC8A controller

Improved flexibility in mounting direction

The mounting direction can be shifted by operating the shaft in the opposite direction.

Floor and ceiling mount models available.

*If you need to change the mounting type, please contact our sales representative.

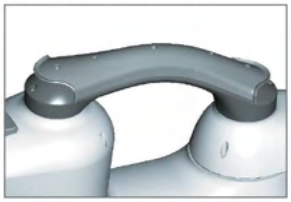
Optimum layout

Optimized layout allows the robot to achieve high-speed motion.

Weight reduction at the tip of the arm and optimized arm structure made possible by integrating a high-capacity motor into the base unit allow the robot to improve its high-speed performance.

Options

Wiring sub-arm protection kit



Protects external wiring to prevent cables from becoming unorganized and avoid the risk of broken wires.

Built-in Ethernet

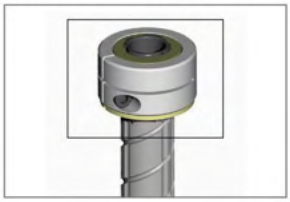
An Ethernet cable is built into the body. Easily connectable to external devices.

*Ethernet connectors (sold separately) are available as options.

External battery specifications

The encoder backup battery installed outside the robot facilitates easy replacement of batteries and improved maintenance.

Stopper with wiring protector



This stopper can protect wiring that is installed through the hole of the bearing located at the top of the Z-axis shaft.

HM Series

Supported robot controllers

RC8A ▶P.50

HM-4060 / 4A60 / 4070 / 4A70 / 4085 / 4A85 / 40A0 / 4AA0

The HM series consists of a rich line-up of models with the maximum arm length and payload among DENSO 4-axis robots to meet specific needs.

Maximum arm reach	600 to 1,000 mm
Maximum payload	10 / 20 kg
Standard cycle time	0.29 / 0.31 sec
Position repeatability	±0.02 / 0.025 mm

LPH Series

Supported robot controllers
RC8A ▶P.50

LPH-040

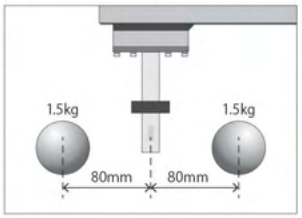
multifunctional, low-cost SCARA robots with lightweight,compact designs

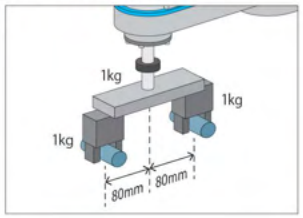
Maximum arm reach	400 mm
Maximum payload	3 kg
Position repeatability	±0.02 mm
Mounting orientation	Floor

Features

Gripper design with high degree of freedom

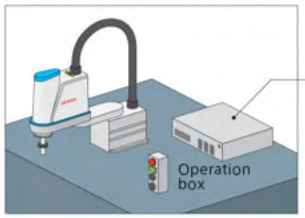
The maximum moment of inertia of the T-axis is large in order to provide a gripper design with a high degree of freedom. Also supports use in other configurations including in an overhanging position.

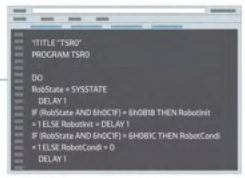




Reduction in work time without the use of PLC

The highly functional RC8 series controller*4 is used for the integrated control of the robot and surrounding equipment. This reduces the total cost of equipment.





Privilege task function

Enables control from PLC with no programming knowledge required

A function block (FB) that supports 130 types of robot commands allows a PLC to control the robot directly. This feature allows adjustments to be performed with only PLC knowledge without needing to create programs on the robot side, to realize a reduction in work time for initial adjustments at the start of use.

Specifications

Item		Specifications
Model		LPH-040A1-N15-NNN-NNNNN-3NAN (*1)
Position detection method		Absolute encoder
Drive motor / brake		All-axis AC servo motor / Z-axis with brakes

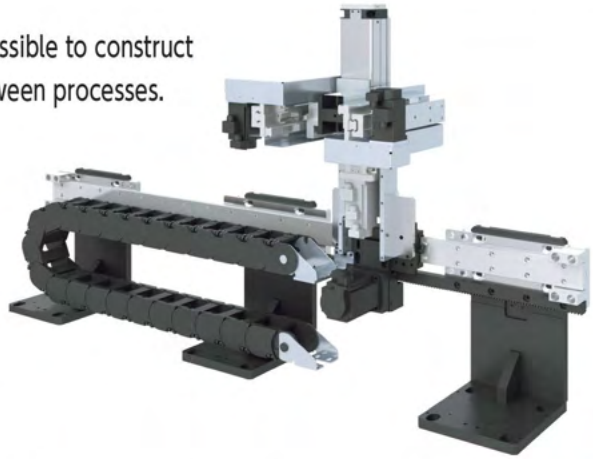
SC Series

Supported robot controllers

RC8A ▶P.50



A compact design based on a proprietary structure makes it possible to construct equipment that's ideally suited to transporting workpieces between processes.

Compact structure that can accommodate a variety of equipment layouts

An expanding and contracting structure lets you minimize the width of the equipment's front surface.

Long-distance, high-speed transport

Transport workpieces at high speeds of 2 m/sec over distances of up to 12 m.

Interoperation of multiple units to accommodate fluctuations in production volume

Multiple robot units can be mounted on a single rail, allowing the number of units to be increased or decreased in response to production volume.

Extensive range of options to accommodate a variety of tasks

Robot controllers

Robot controllers

The RC9/CRC9 robot controller provides equipment integration control and an integration development environment that inherits the DENSO Robotics development environment.
You can use it to build systems with original robot control and safety performance.
It delivers the ease of use that customers require.

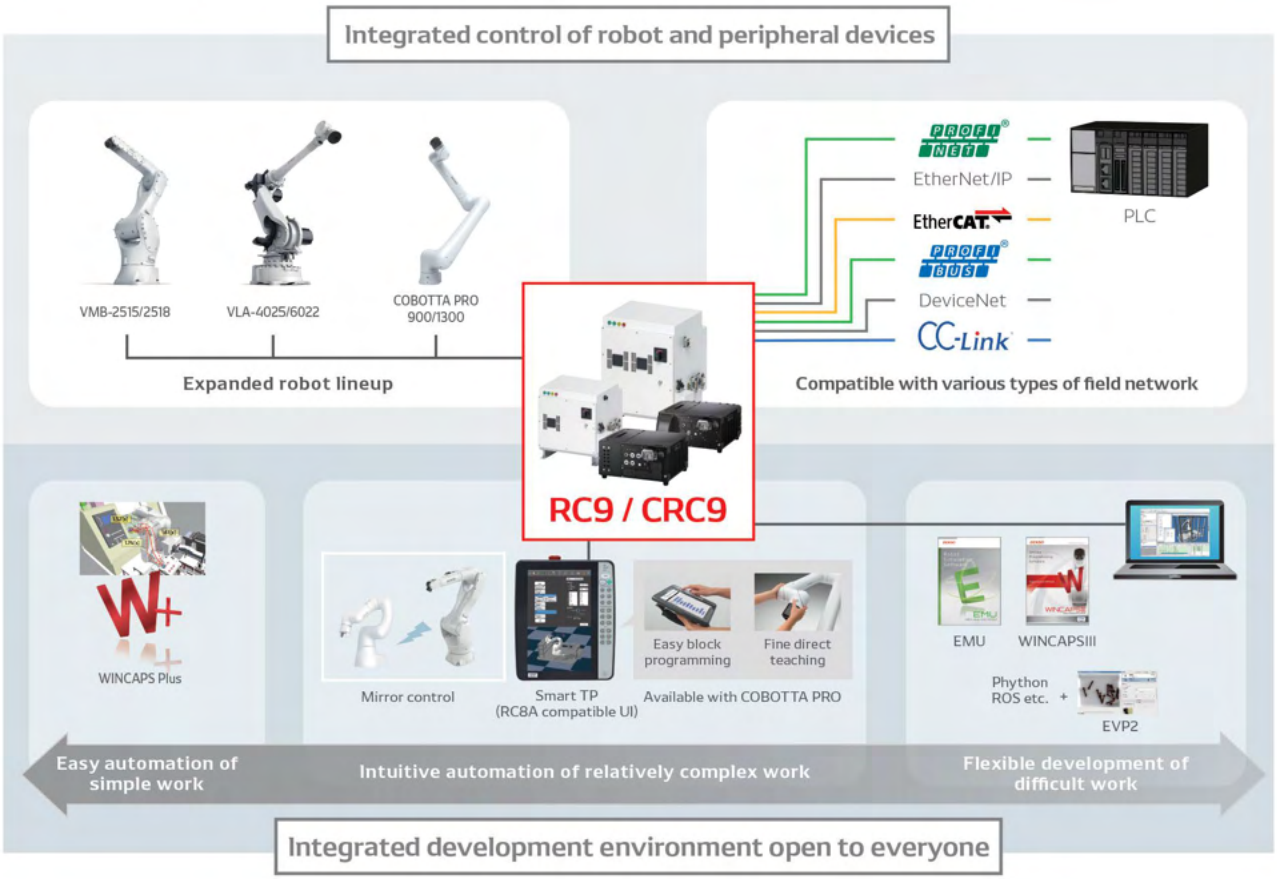
RC9/CRC9

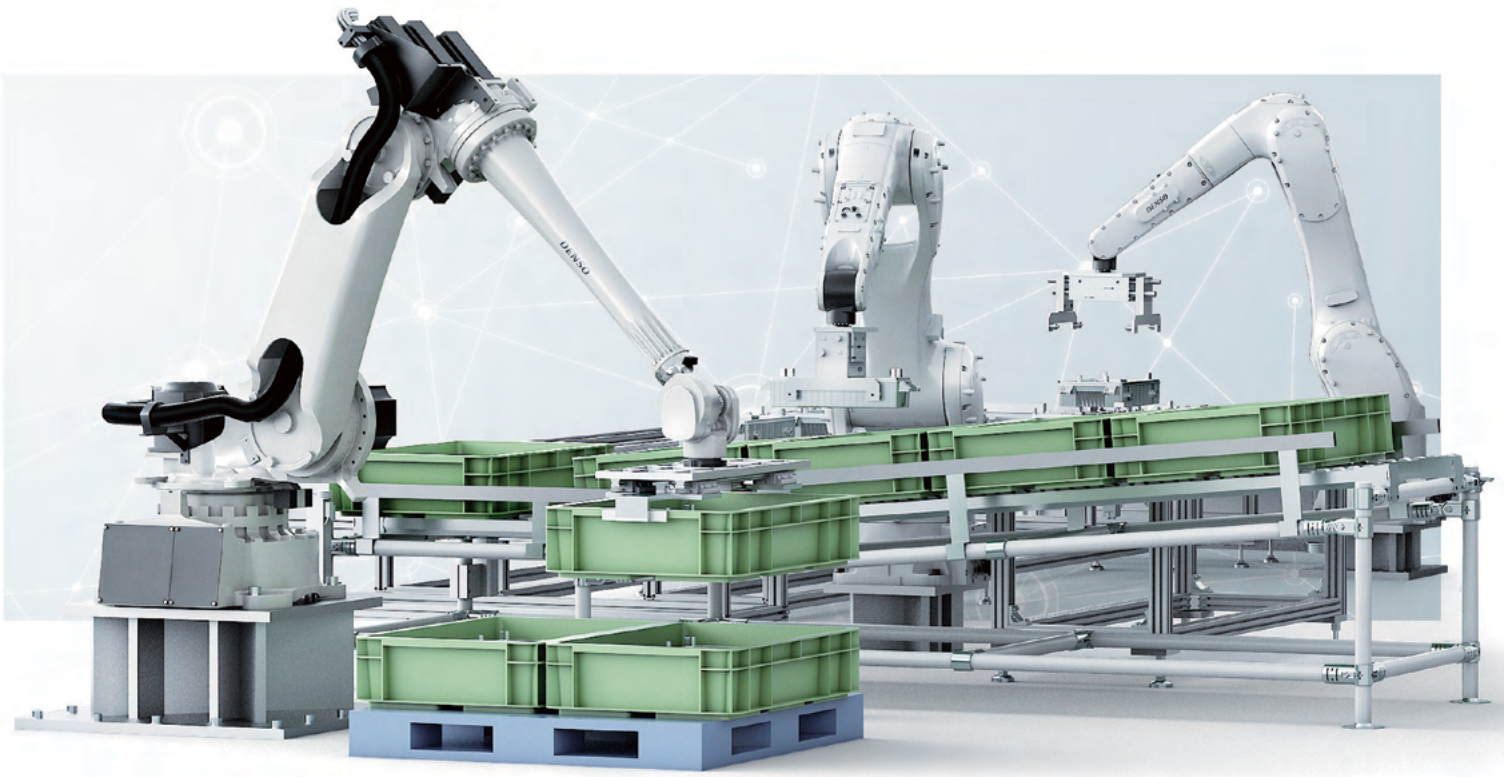
DENSO is developing robot controllers with the aim of creating a robot language that anyone can use, while considering standardization and openness in the development environment.
We have been developing JIS-compliant industrial programming languages since the 1990s, and released the Windows OS-compatible middleware "ORiN," which offers excellent connectivity with peripheral devices.
In recent years, the introduction of robots into various industries has led to an expansion of applications and links with general-purpose software.
The RC9/CRC9 robot controllers adapt to the increasing sophistication and complexity of robot control equipment while maintaining the legacy development environment.

Achieving DENSO robots' goal of simplification

The RC9/CRC9 controllers allow you to select the most suitable robot, peripheral equipment, and software for your application. The integrated control of robots and peripheral devices expands the range of automation from simple tasks to complex work. Furthermore, to create an integrated development environment suitable for all related workers, from experienced engineers to people unfamiliar with robots, various tools are provided, such as new functions, teaching devices, and application software. These features deliver simplicity and peace of mind for everyone involved in robot start-up and operation.

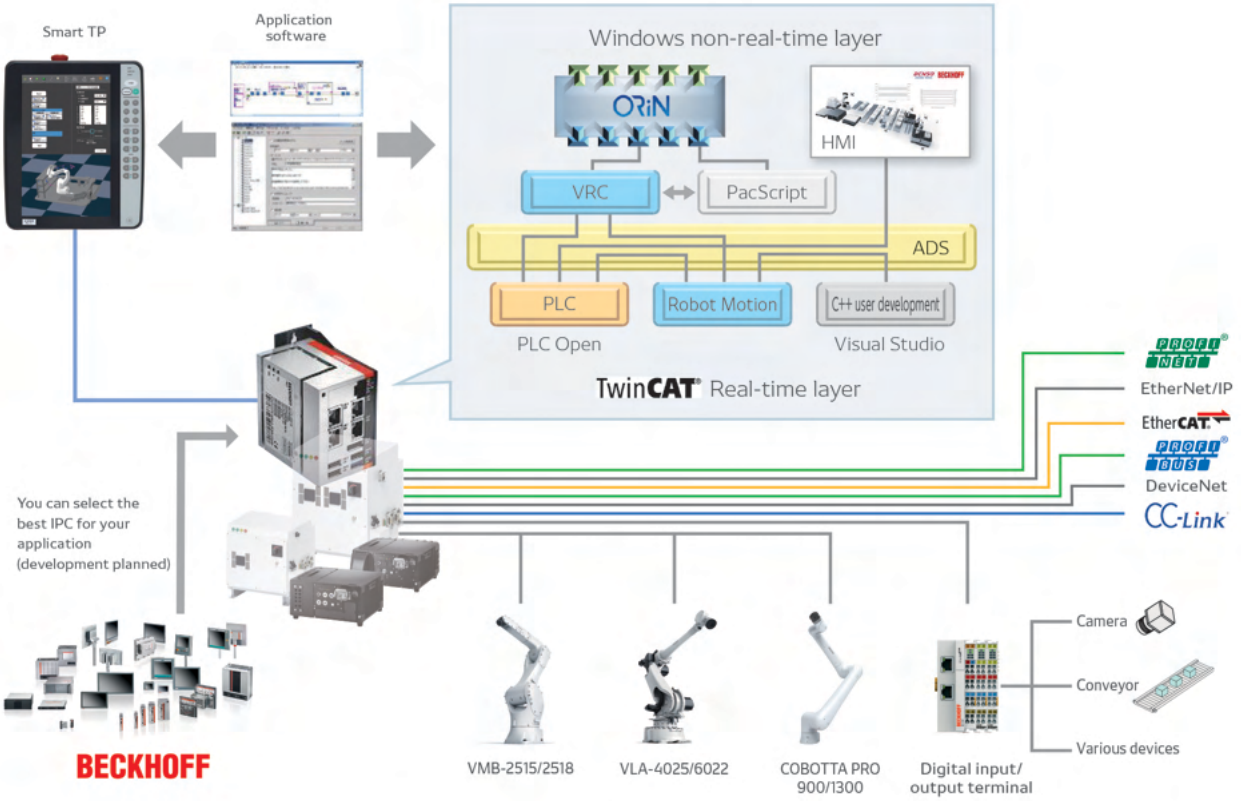
* CRC9 is a dedicated controller for COBOTTA PRO, which was developed based on RC9.





Controller for integrated equipment control

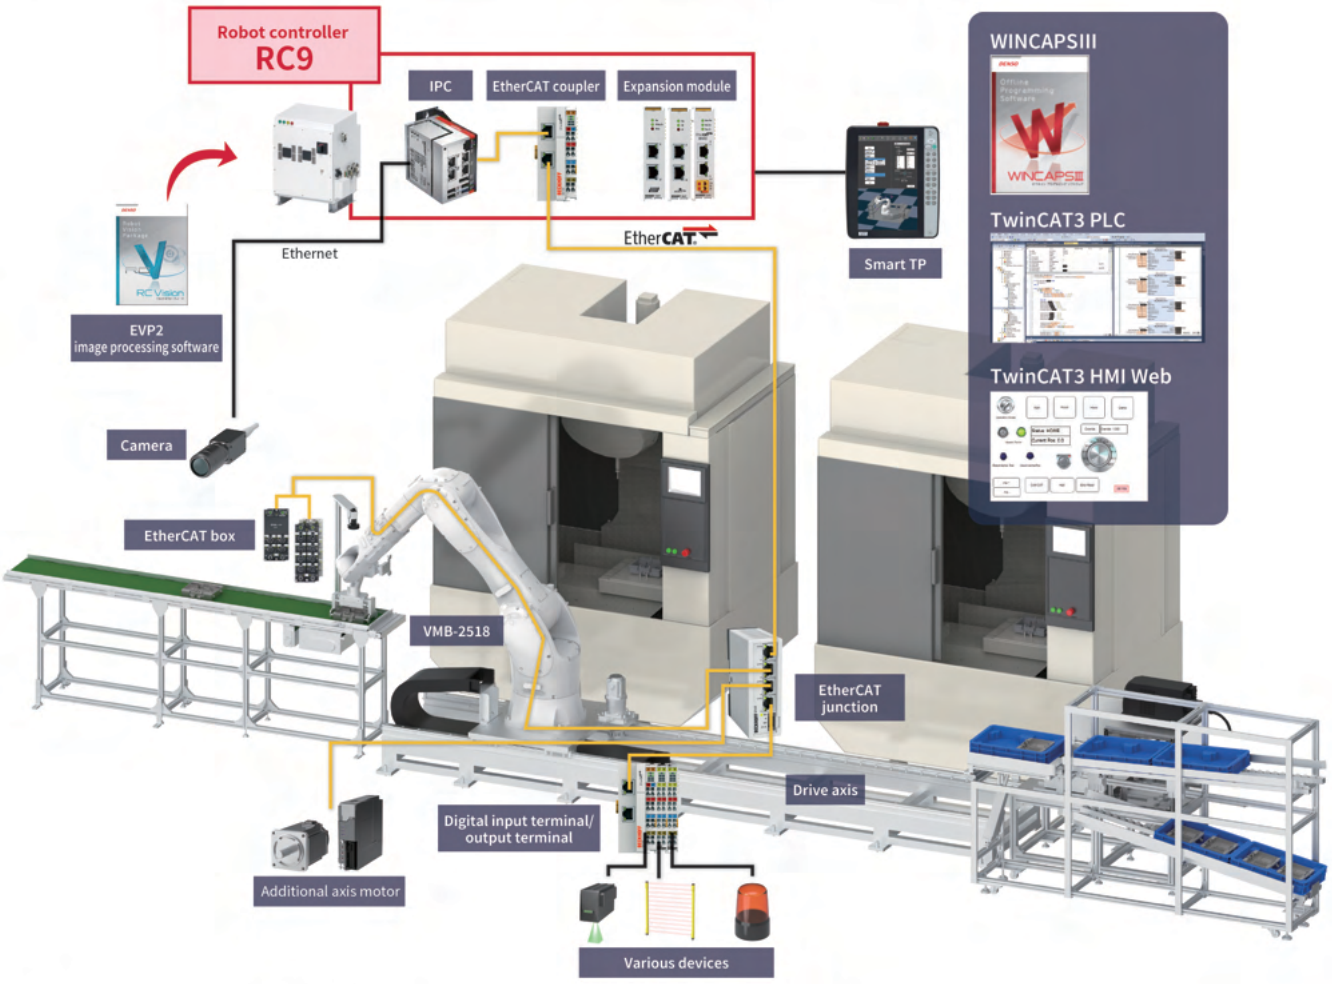
Combining selectivity for optimization according to the application, openness for integration of the user, system integrator, and manufacturer technologies (* CRC9 is under development), and expandability for simple integration of the entire system, the RC9/CRC9 controller achieves simple integrated equipment control.



RC9/CRC9

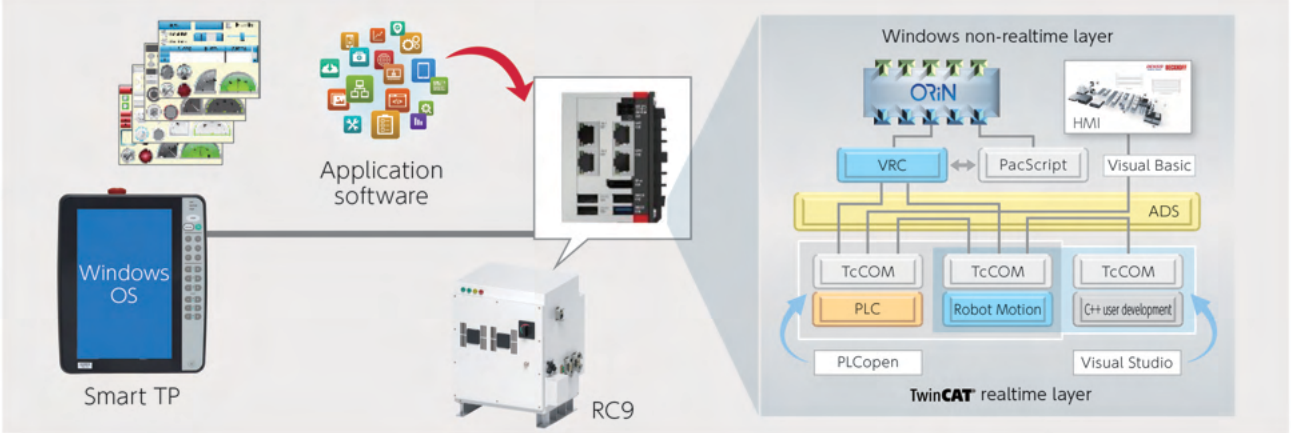
RC9 controller for integrated equipment control

- A single IPC can be used for the integrated control of the robot and peripheral devices, enabling simplification with a stand-alone device
- Supports various development environments, not only the robot language. Provides the ease-of-use of familiar environments
- Software PLC* and image processing software* are built into the robot controller *Options



Supports various development environments, not only the robot language

A key feature of RC9 is its open development environment. RC9 enables development in the same environment not only for manufacturers but also for users and system integrators, which expands the range of applications that can be automated. (* CRC9 is under development)Furthermore, the controller supports various development environments without being limited to robot languages. This means that users can use familiar general-purpose languages (such as ladder logic and C++) to control robots and peripheral devices such as conveyors and for the integrated control of equipment using PLC software built into the IPC.



EVP2 image processing software is built into controller *Options

EVP2 can be built into the robot controller to enable central control from the robot program. The image processing settings are configured in the application (EVP2 Guidance) on the PC, and the robot and camera calibration can be easily set with a wizard-like GUI. Also, during execution (EVP2 Runtime), operation is possible only on the robot controller and connected cameras. As a result, the configuration is simple. It does not require an image processor or communication program to transmit the image processing results to the robot, thus providing easy and space-saving image processing.

* EVP2: A robot vision application software package that utilizes DENSO robots and cameras to support equipment startup.

Smart TP used as equipment HMI

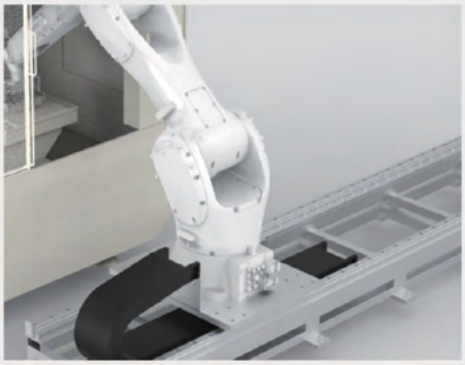
Smart TP is a highly functional teaching pendant exclusive to the RC9 controller. This can be used in various situations for setting robot operations and multiple parameters and as an equipment display device and control panel. The large 10.1-inch touch panel runs on Windows 10. Screens created by TwinCAT3 PLC HMI and programming screens created by TwinCAT3 PLC can be displayed.
This teaching pendant has superior functionality, visibility, and operability compared to conventional types.

Used as a highly functional teaching pendant

Used as a control panel display device for the equipment

Displays screens created by TwinCAT3 HMI Web

Additional axes controlled from robot controller



A drive unit or other parts can be controlled using the additional axis control function. Initial setup is easy using the auto gain tuning function. This makes it possible to control a robot's peripheral devices, for example a drive axis, servo hand, or tray changer, as an additional axis using the same interface as the robot.

RC9

Robot controller

The RC9 is a new concept in robot controllers that can be supplied as firmware. This approach allows us to supply robot systems that are optimized for individual customers.

Specifications

Item		Specifications	
Applicable robots		VMB-2515/2518	VLA-4025/6022
Power supply	Power supply capacity	4.5kVA	10.0kVA
	Input voltage range	3 phase 200 V AC -10% to 230 V AC +10%	3 phase 400 V AC -10% to 480 V AC +10%
	Power supply frequency	47~63Hz	
Power cable length		10 m	
Number of control axes		6	
Control system		PTP, CP 3D line, 3D arc

System configuration diagram

Safety Motion Function

*Planned for release in 2024

Enables common use of the motion area while achieving both safety and high productivity.

1 Motion range monitoring

Uses the safety virtual fence function to monitor that the robot does not move outside the set motion range.

■Benefits

- Enables installation of minimum required safety fence for compact equipment design
- Enables installation of common work areas for workers and robots using sensors*

2 Speed monitoring

Uses the monitored-speed function to monitor that the robot does not exceed the set operating speed.

■Benefits

- Reduces the speed to a safe level when a sensor* detects an approaching worker

3 Robot Stop monitoring

Uses the Robot Stop monitoring function to monitor that the robot remains stationary after having stopped with its motor ON.

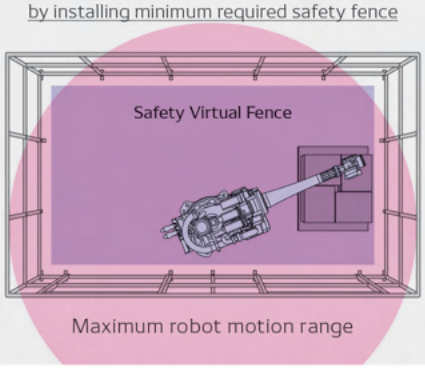
■Benefits

- Robot stops with the motor ON when a sensor* detects the entry and presence of an operator inside the stop area
- Enables fast restarting of the program by maintaining the standstill status

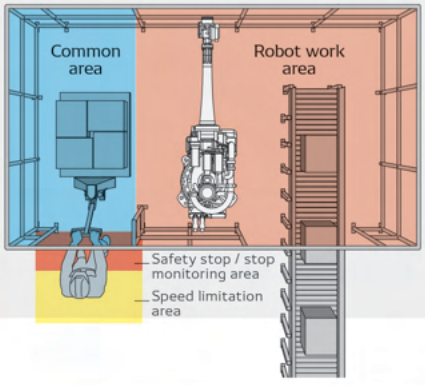
*Additional safety measures, such as installing sensors, may be required following a risk assessment.

Features

●Compact equipment design
by installing minimum required safety fence



●Common areas allow
compact equipment design



Safety features

Name	Description
Emergency Stop Function	Decelerates the robot until it stops, and then turns OFF the motor. The current program will be Reset-Stopped.
Protective Stop Function	This function is to be connected to a signal from a safeguard or the like installed in the robot system/cell and stop the robot in response to the input signal.
Monitored-Speed Function	Monitors the robot speed to confirm if it does not exceed the specified speed.

Name	Description
Axis Limiting Function	Monitors the robot axes to confirm if they are not out of the specified motion range.
Monitored Standstill Function	Monitors the robot to confirm if it remains stationary after having stopped with its motor ON.
Safety Virtual Fence Function	Monitors the robot to confirm if it does not go beyond the specified motion range.

RC8A Robot Controller Development Code No. 8

Robot controller

State-of-the-art DENSO robot controller supporting the global standard specifications

Exceptional usability

Improved GUI increases work efficiency

Easier-to-view menu configuration and more user-friendly operability are realized.
Improved GUI and functionality help reduce time spent on robot deployment.

Compliance with global standards

Open Network

ORiN2 (ISO 20242-4 compliant)
Open Resource Interface for the Network Version 2

Standards / Certification

- ISO 10218-1:2011 / CE (Standard specification, Safety motion specification, UL specification)
- UL (UL specification)
- PLe / SIL3 (Standard specification, UL specification)
- PLd / SIL2 (Safety motion specification)
- KCs (Standard specification, Safety motion specification)

* Please feel free to contact DENSO Robotics for details of the acquisition of certification.

Field Network

Supporting a wide range of network standards used in the FA field.

Safety motion function

Safety function that allows humans and robots to work in a shared area

Supported controller RC8A

Safety features

Name	Description
STO (Safe Torque Off)	Function for immediate shutdown of the motor power
SS1 (Safe Stop 1)	Function to shut down the motor power after slowing down and stopping the robot
SS2 (Safe Stop 2)	Function to leave the motor power on after slowing down and stopping the robot
SOS (Safe Operating Stop)	Function to monitor the robot does not move from the stop position
SLP (Safely-Limited Position)	Function to monitor the axes do not exceed the soft limit

Name	Description
RSM (Robot Speed Monitoring)	Function to monitor the robot's specified sections do not exceed the specified speed.
RPM (Robot Position Monitoring)	Function to monitor the robot's specified sections do not exceed the specified motion area
SBC (Safe Brake Control)	Function to turn off the external brake power and lock the brake

*Equipment must be used only after performing risk assessment, implementing safety measures, and checking that hazard to humans is thoroughly prevented.

When entry of a human into the set motion area is detected by devices such as laser scanners, the robot speed is limited to the specified safe speed or less to enable continuous production. The robot stops moving when the human enters the stop area.

Wide expandability

Many devices can be custom controlled and connected to meet a wide range of needs.

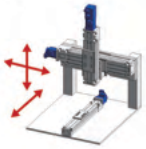
Supports the development of custom robots

Allows for designing robots for any stage of production based on the customer's goals, conditions, and environment.

Orthogonal robot

Cylindrical coordinate robot



Tabletop robot

SCARA robot

Parallel-link robot

5- and 6-axis robot

Exceptional usability

Uses a RC8A interface specially adapted to robot control

Shorten startup time

- Use of the same off-line software and teaching pendant as for all current DENSO Robotics products let customers continue to use controls they're familiar with, reducing the number of work-hours necessary in order to use the robot.
- Reduces worktime in the design of emergency stops, etc. by making use of the MC8A's safety circuits
- Provides ease of use by allowing gain tuning and other adjustments to be performed using MC8 functionality.

Maximum 8-axis control + wide expandability

Utilizes an RC8A provider to directly control various FA devices

Improving efficiency by integrating control

- Using ORiN allows usage of the RC8A provider functions. This makes integration of various FA devices much simpler.
  It also allows for control of any application in a standard program language and reduces programming and maintenance man-hours.
- Uses the same GUI as the RC8A providing greater efficiency.

World-class safety

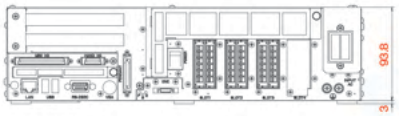
Complies with the same global safety standards as the RC8A.

Standards / certification

- CE (standard specification, safety motion specification, UL specification)
- PLe/SIL3 (standard specification)
- UL (UL specification)
- KC (MC standard specification)

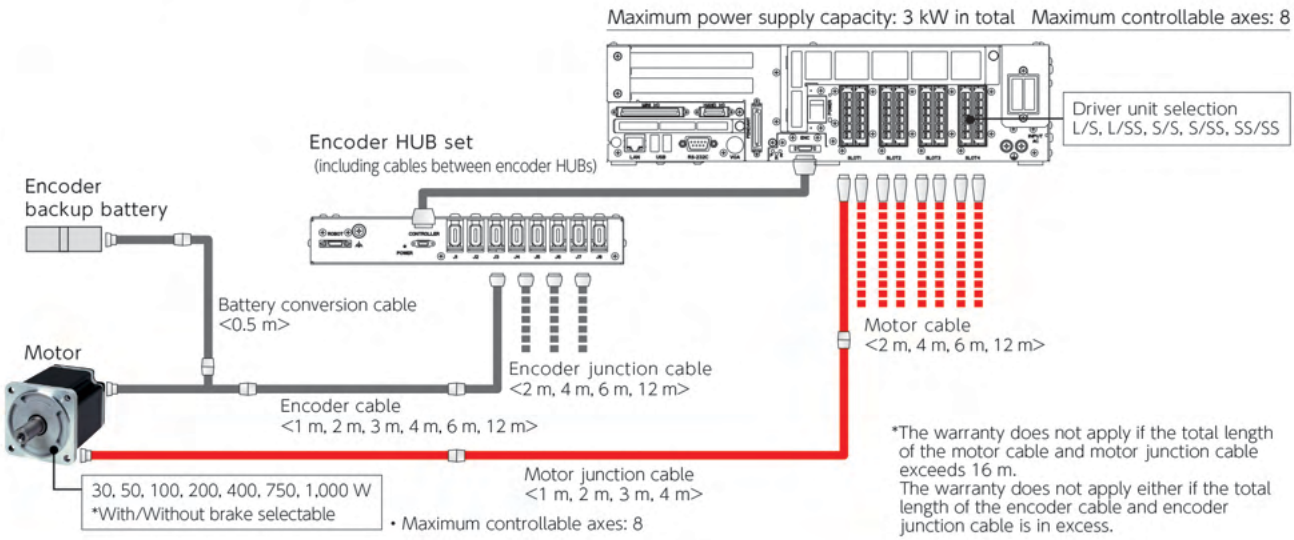
External dimensions Unit: mm

MC8A



*For safety motion, standard UL and safety motion UL specifications, see external dimensions on P.43.

System configuration diagram



HIGH PERFORMANCE TEACHING PENDANT

Smart TP

Supported robot controllers

RC9 ▶P.44

Smart TP is a high performance teaching pendant that can be used in a variety of situations, such as configuring robot settings, teaching, and serving as an HMI.

Features

Embedded with the large touch panel

Smart TP runs on Windows 10 and features a large 10.1" screen for improved operability.

Splashproof with IP54 protection rating

Improved GUI for increased efficiency

Easy-to-view menu configuration and user-friendly operability are realized. With improved GUI or functions, simulation of robot introduction can be checked on the pendant and work time can be reduced.

Applications

As a teaching pendant

Smart TP is equipped with a teaching function that allows each axis of the robot to be adjusted.

As an HMI

It can be used as an indicator not only for robots but for the entire facility.

Functions

RC8A compatible UI

Compatible with the existing RC8A controller, maintaining the legacy development environment and ensuring operability.

WINCAPS Plus UI

Compatible with the GUI of "WINCAPS Plus," an Offline Programming Software group.

Customizable control panel screen

Screens created by TwinCAT3 HMI Web can be displayed.

Specifications

Item	Specifications
Size	10.1" (16:10)
Resolution	WXGA 800×1,280 pixels
Touch screen	Transmissive capacitance type
Backlight	LED
Dimensions (L x W x H)	215 × 284 × 69 mm
Weight	Approx. 1,120 g

PERIPHERALS

Teaching pendant / Mini pendant

Supported robot controllers

RC8A ▶P.50

These are input and operation devices for teaching, program creation or startup. Use in combination with WINCAPS®III enables efficient programming and teaching.

Teaching pendant

Mini-pendant

Features

Embedded with the large touch panel

A 7.5-type TFT is embedded to realize simple visual check and operation with color display and touch panel.

Improved GUI for increased efficiency

Easy-to-view menu configuration and user-friendly operability are realized. With improved GUI or functions, simulation of robot introduction can be checked on the pendant and work time can be reduced.

The screen can be customized using control panel functions.

The teaching pendant screen can be customized as a control panel of robot and peripheral devices.

Protection grade

Splash proof equivalent to IP65

Mounted with an enable switch

The pendant is mounted with a 3-position enable switch.

Specifications

Item	Multifunction teach pendant	Mini-pendant *1
Power supply	24 V DC (Supplied from the controller)	
LCD	Liquid crystal display with back light, 7.5-type TFT color LCD,multi-function 640×480 pixels	Liquid crystal display: 128 x 64 pixels
Emergency stop button	4B contact, 4-circuit output (Forced-separation type)	
Dead man's switch (Enable switch)	3-position-type (OFF-ON-OFF), 2-circuit output	
Mode-switching switch	3-position switching with keys(AUTO, MANUAL, TEACHCHECK) Note: Mode is switchable only when using the pendant with keys	
Mounting conditions	Temperature: 0 to 40° C, Humidity: 90% RH or less (no condensation allowed)	
Protection grade	IP65	
Weight	1.6 kg or less (Not including the cable)	Approx. 0.3 kg (Not including the connection cable)(Note)
Cable length	4 m, 8 m, 12 m	

*1: The mini-pendant itself cannot create or edit programs. Program creation and editing are performed using the WINCAPS®III Light, a mini-pendant accessory.The maintenance functions below are also furnished.
(1) CALSET operation (2) Motor encoder reset (3) Setting of the calendar and clock built in the robot controller (4) Setting of the date for next battery replacement (5) Brake release and operation

Robot Protective Jacket for Food Processing

Manufacturer: WAKO CLOTHING CO., LTD.

Simply fit this jacket over a standard-specification robot. to easily and inexpensively automate food manufacturing processes that require cleaning.

Supported robots	VS068 / VS087
Supported controllers	RC8A

*Standard flange specification only

Features

Easily fitted to implement low-cost automation of food manufacturing processes

To fit the jacket, simply place it over the robot and tie the drawstrings to hold it in place. Then remove from the robot for cleaning as necessary. Alternatively, the jacket can be secured to a pedestal with a dedicated plate*. It can also be cleaned while fitted to the robot by spraying with water or wiping with a moist cloth.

*Dedicated plate should be supplied by customers.

Compatible with chemicals used in food manufacturing processing

The jacket is resistant to a variety of chemicals, ensuring that it will remain clean and sanitary at all times.

Chemicals to which the jacket is resistant	• Sodium hypochlorite aqueous solution (alkaline) • Sodium hypochlorite pH conditioning liquid (weakly acidic) • Alcohol • Hot water (40° C to 100° C)

Stow wiring by using the dedicated mounting flange

Since cables can be routed from inside the robot protective jacket for food processing through holes in the mounting flange, robot hand cables can be stowed inside the jacket.

*1: Movable range includes composite movements by all axes. The standard specification movable range applies to single-axis movements.
*2: Depends on the movable range of customer robot. Customer to configure software limits.
*3: Addition of a jacket may cause the robot to heat up more readily than previously. *4: A maximum of six signal lines and air pipes may be routed outside the robot jacket. *5: Standard type, protected type

DRH Series Electric Hand

High-Accuracy Manipulator

A simple add-on to a DENSO robot for high-accuracy gripping and position control.
All-in-one teaching is also provided.

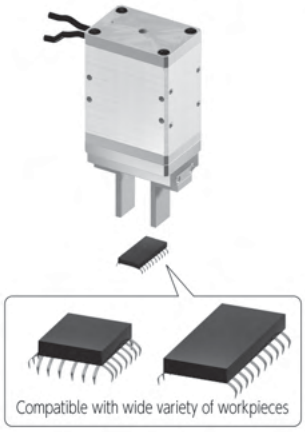
*For details, see our website.

Features

Intelligent handling (fast cycle times, improved quality)

Compatible with many part numbers

Multi-point position movement



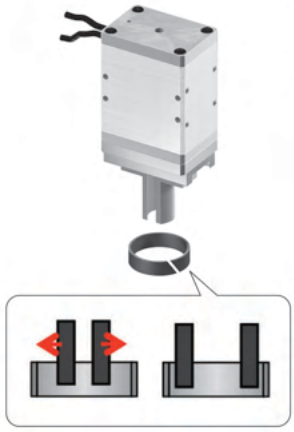
Dimension check

Dimension measurement function (workpiece dimension measurement ±0.05 mm)

Conventional

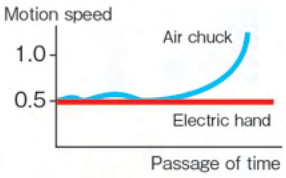
Deformation prevention

Speed/gripping force control



No changes over time

Motion more constant than pneumatic system



Wide variety

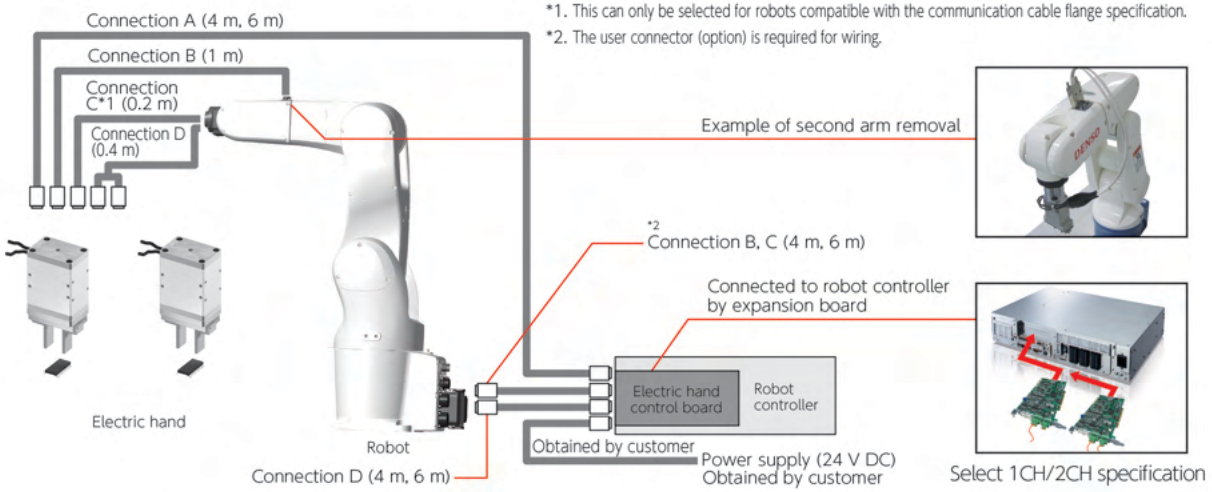
Small single cam type
SS-2005-3N / 2005-5N

Single cam type
SS-2010 / 2815 / 4225

Double cam type
SD-2005 / 2810 / 4220

Screw type: Straight / T-shaped
FS-2020 / 2840 · FT-2020 / 2840

Simple connection (expansion board and internal wiring eliminates hassle of wiring)



*1. This can only be selected for robots compatible with the communication cable flange specification.
*2. The user connector (option) is required for wiring.

RC8 Controller Protective Box Light

Protect your robot controller from harsh environments where equipment is exposed to oil, dust, and other contaminants.
The product offers the same waterproof performance as the previous design, but at a lower price.

Compatible controllers	RC8A (standard specifications, safety motion specifications, and safety I/O-less specifications), RC8

*VM series, VS068/087 with extended-joint support
If using the MC8 (with total motor capacity of 2,000 W or greater), use the previous RC8 Controller Protective Box.

Features

IP54 protection to withstand harsh environments

The RC8 Controller Protective Box Light delivers the same IP54 protection as the original RC8 Controller Protective Box, but at a more affordable price point.

Space for options

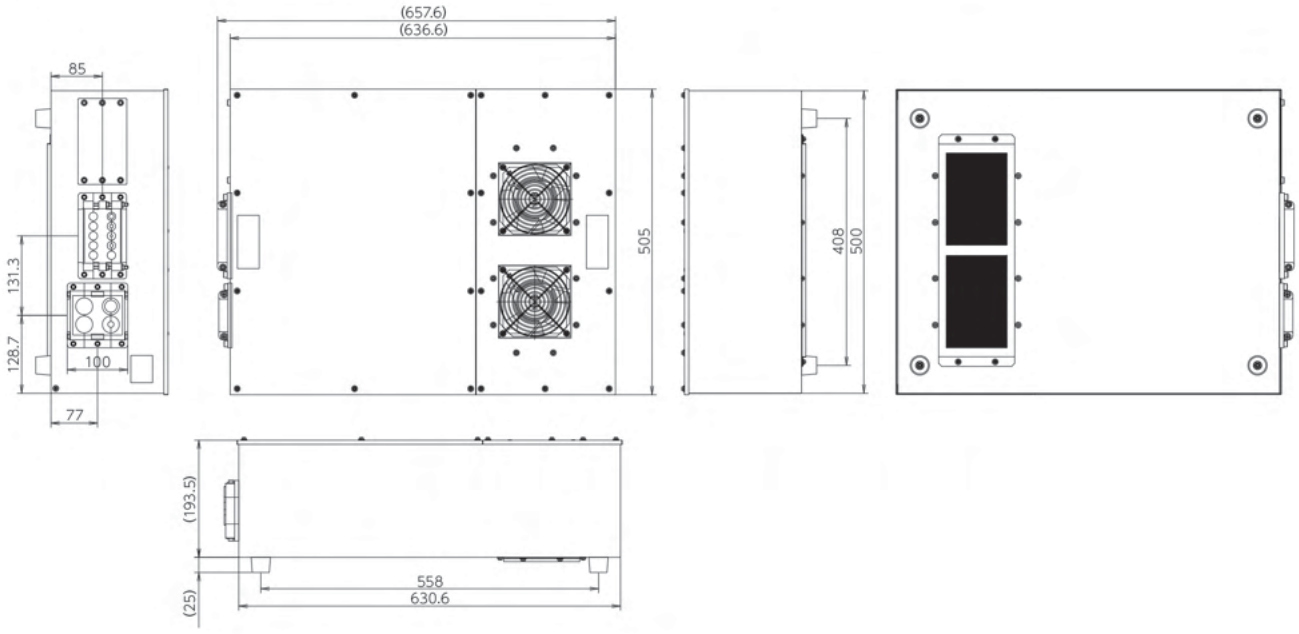
The box can accommodate an encoder HUB.

Specifications

Item		Specifications
Supported controllers		RC8 type controllers (with space for encoder HUB)
Operating environment (temperature and humidity)	During operation	0°C to 40°C, 90% RH or less (no condensation allowed)
	During storage or transport	-10°C to 60°C, 75% RH or less (no condensation allowed)
Protective structure		IP54 or equivalent
Installation orientation		Freestanding
Weight		Approx. 17.5 kg (not including robot controller)
Power supply *1	Three-phase	185-253 V AC (200 V AC-7% to 230 V AC +10%)
	Single-phase	207-253 V AC (230 V AC ±10%)
Heat exchanger	Cooling capacity	25 W/K (calculated for temperature difference of 1°C)
	Power supply	From controller power supply (using single-phase 200 V AC from branch at terminal block)

*1: Differs from the power supply specifications of the standalone RC8.

Dimensional outline drawing



Automatic Hand Changer

Features

- Can be attached as is to the flange area of a DENSO robot.
- Comes standard equipped with a mechanism to prevent the hand from dropping due to reduced air pressure, and an airlock check valve used when detaching the hand.
- Up to 6 pipes and 10 wires can be connected.

Compatible robots	Name	Model	Weight	Moment of inertia	Thickness	Hand mounting hole

AHC unit (robot side)

Specifications

Item			Specifications	
Model			AHC5 (5/6-axis specification)	AHC10 (4-axis specification)
Position repeatability			±0.01mm	±0.015mm
Connection axial force resistance (0.5MPa)			802N	1420N
Moment resistance (0.5MPa)			24N·m	49N·m
Torque resistance (0.5MPa)			24N·m	49N·m
Ambient temperature			0 to 60°C	
Interfaces	Air	Circuits	6	
		Maximum usage pressure	0.7MPa	
		Effective cross-section area	1mm²	
	Electricity	Connections	10	
		Contact point capacitance	3A	

AUTO-ID Products

Auto-recognition products for use in manufacturing

In applications such as…

- Process / progress management
- Shipping and receiving inspection
- Picking
- Inventory management
- Automated lines

Handy terminal

BHT-M80: BHT-M60 series

Android™ 10 for exceptional communications capabilities and operational expandability

- The product line includes the BHT-M80, which features a large, 5.0" display, and the BHT-M60, which combines a 3.2" display designed for maximum ease of use and a keypad.
- Built with best-in-class drop resistance to withstand daily use.

QR code solutions

Face authentication SQRC

Provides rigorous authentication performance, making it ideal for applications such as the detection of credentialed users.

- Data describing facial characteristics is converted into a secure QR Code (SQRC) to enable authentication without requiring new servers or other equipment.
- One-on-one offline authentication that avoids storing personal information on a server reduces security risks.

UHF-band RF tag high-power handy scanner

SP1

The world's highest reading performance

- Streamline operations with scan speeds of up to 700 tags per second and a scan range of about 8 m.
- DENSO's proprietary RFID verification app features smooth deployment and stable operation.

UHF-band RF tag fixed scanner

UR40 / UR50

Reliable scanning, even on high-speed conveyor lines

- The UR40 delivers long-distance scanning at distances of up to 8 m. *1
- The UR50 delivers scanning at super-close distances of 5 mm to 50 cm (when using an expansion antenna).
- High-speed scanning at up to 600 tags per second helps reduce lead times. *2

UR40 UR50

*1: With linear polarization.
*2: Subject to country- and function-specific limitations. Reference values; performance varies with actual environmental conditions.

Software

Software

Result-oriented and more efficient: Expanded DENSO Robotics Solution.

From the implement decision phase to robot maintenance, a variety of helpful production site and factory floor tools are offered to make DENSO Robotics easy to use.

Software Line up

ORiN Version 2

WINCAPS®III

Offline Programming Software

Software used to program DENSO Robotics (PAC language, PacScript) and create simulations on the program

WINCAPS® Plus

Offline Programming Software

Software used alongside WINCAPS III to provide optimal applications for use cases such as design, deployment, and maintenance

EMU

Robot Simulation Software

Software that allows you to run simulations for multiple DENSO Robotics

RC Vision

Robot Vision Package

A robot vision application software package that utilizes DENSO Robotics and cameras to support equipment startup

Robot Tools

Utility Application Software

Software to support optimum maintenance and operation of DENSO Robotics based on running costs and daily maintenance

VRC

Virtual Robot Controller

An emulator that creates an image of RC8A (robot controller) itself and provides a virtual RC8A environment on the PC

ORiN® 2 SDK

Software Development Kit

Middleware used to develop an application program or provider based on the ORiN®2 specifications

Mobile Tools

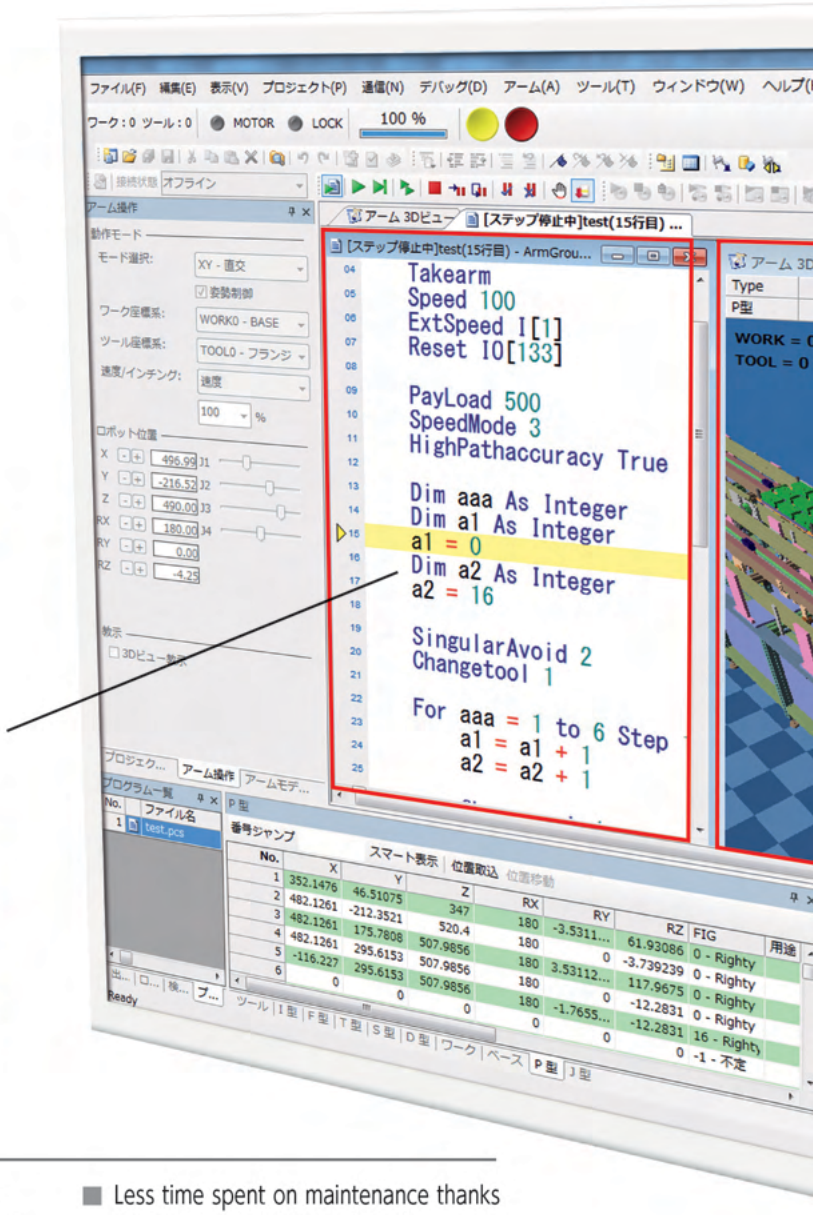
Smart Device Application Software

A set of application software for smart devices that support equipment startup or maintenance using DENSO Robotics products

WINCAPS®III

Offline Programming Software

WINCAPS III software provides across-the-board support for DENSO Robotics, from the deployment study stage to maintenance.
The software supports operation of DENSO Robotics products by providing an extensive range of functionality at low cost, including for creating robot programs, backing up controller data, and reviewing robot posture using 3D drawings.



Accessible interface and ease of use

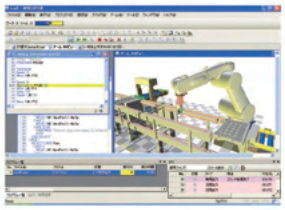
WINCAPS III delivers intuitive ease of use and refined operability so users can easily check teaching points and interference with peripherals.

Program creation

Immediately simulate program content in the program editing window on a PC. You can also display errors like spelling mistakes using the program error-checking function.

Online functions

Connect to robot controllers and use monitor and debugging functions. You can easily send and receive program data and receive and save log data.



Benefits

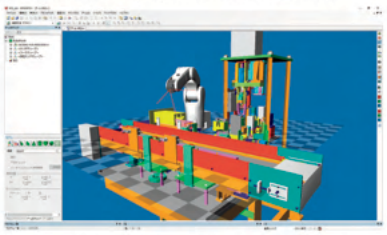
- Less time spent designing and fabricating robotic equipment
  - Significantly shorten the amount of time spent getting equipment up and running.
- Less time spent on maintenance thanks to extensive logging functionality
  - Speed up analysis work.

Features

Equipment conceptualization/design

3D CAD data import
Check equipment interference and teaching points.

Support for VRML and Direct X 3D CAD
Easily check equipment interference and teaching points without relying on the actual hardware.

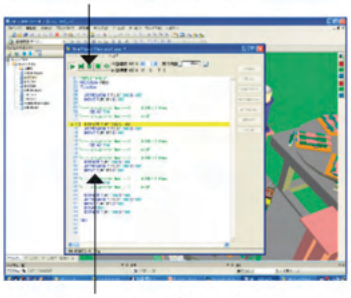


Import 3D data, monitor robot operation, and easily check equipment interference and teaching points using manual controls.

Operation preparation and equipment adjustment

Robot simulator
Simulate robot programs on a PC.

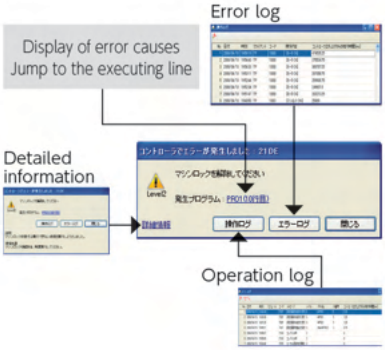
Display speed and cycle time.

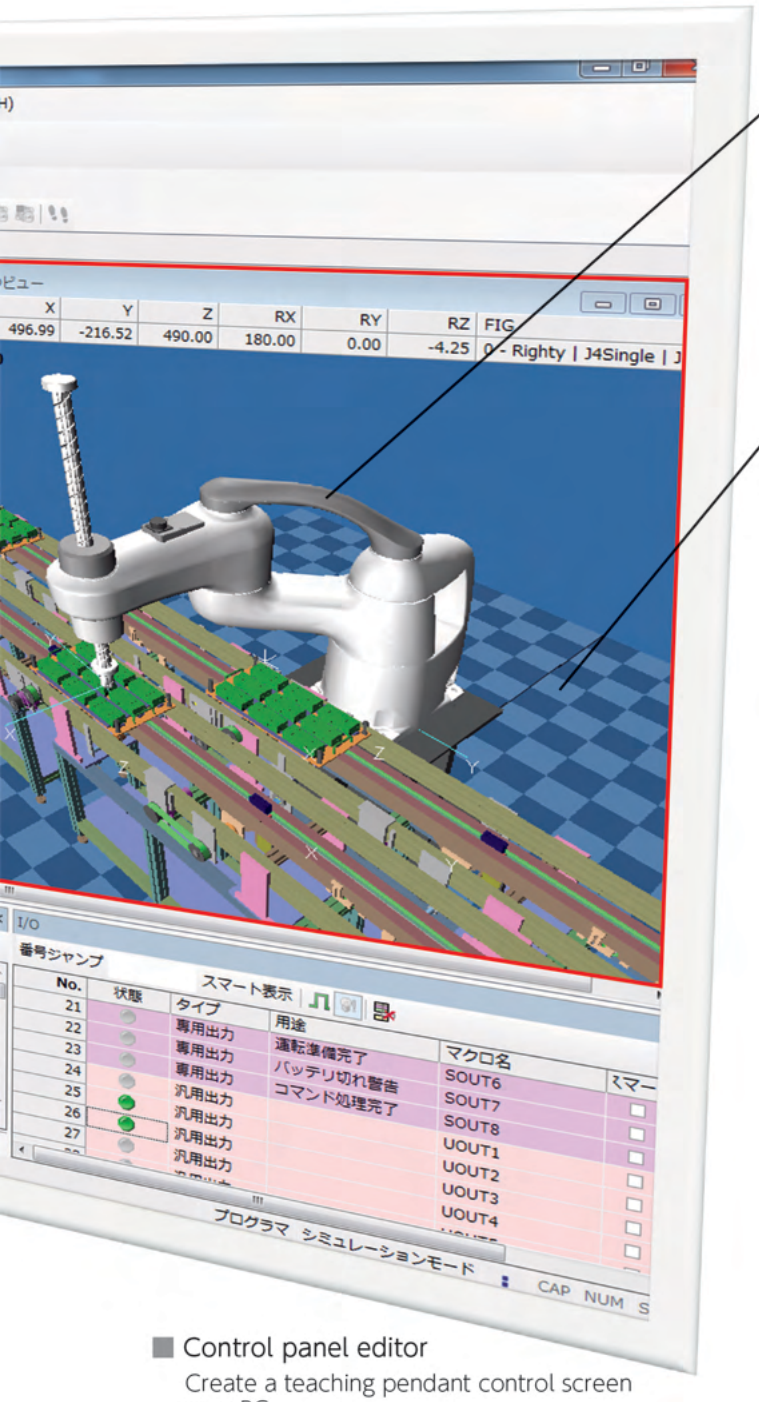


Display the program line being executed.
Unsupported command lines are shown with cross-hatching so they're easy to identify.

Operation/maintenance

Extensive robot analysis tools
Sophisticated monitoring functionality and extensive log management
Generation of backup data





Arm 3D view

Displays the robot and peripheral devices in 3D and simulates robot motion on a PC. Since you can easily zoom in and out and switch perspectives using the mouse, you can perform simulations while viewing the equipment and robot from the desired angle, through 360°.

Simulation functions

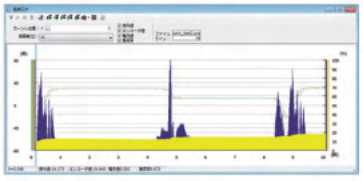
Execute user-created programs on the PC to check cycle time, robot movement, pose and interference. Since you can perform simulations without operating the actual robot, you can develop programs safely and efficiently.

●Convenient functions

- Interference checking
- Cycle time measurement
- Robot path display

Log function

View error logs, operation logs, trace logs, and other data.



Simple calibration

The following 3 types of calibration can be used:

CALSET	Corrects the CALSET value. Overwrites a CALSET value with the correct value based on a standard position when a motor is replaced or the CALSET value lost.
TOOL	Corrects the value of the selected TOOL. Use when a hand or other end effector is recreated, replaced, or newly created.
WORK	Corrects the value of the selected WORK. All WORK coordinates that were set when the robot mounting position is changed can be corrected at once.

Control panel editor

Create a teaching pendant control screen on a PC.

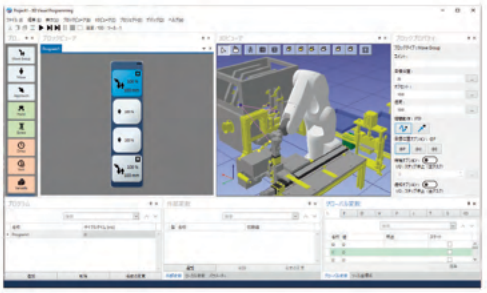
System requirements:
[OS] Windows® 10/ 11
[PC] CPU: 2 GHz or faster multi-core processor, RAM: 2 GB or more, HDD: 1 GB or more

Languages supported: 5
Japanese, English, German, Korean, Chinese

*1: Included with purchase of mini pendant. *2: Supplied with robot.
*3: There are limits to the number of libraries that can be used.
*4: Sampling interval: 1 sec. *5: One program (PRO1) only.

Offline Programming Software

**Used alongside WINCAPS III, this suite of software helps you save man-hours by optimizing operation in use cases such as design, deployment, and maintenance.
Purchase only the software you need.**



3D Visual Programming

This programming software lets you easily teach and control hardware by placing items in an arm view so that it can be used by even programming novices.
It can also be used to create the framework for more complex programs.

Features

Visual teaching and control

Enjoy intuitive operation and teaching by clicking and dragging robots in the Arm Viewer. Since commands such as flow control instructions are shown on the robot's path, you can ascertain at a glance what operations are being performed on the path.

Convert created programs to PacScript

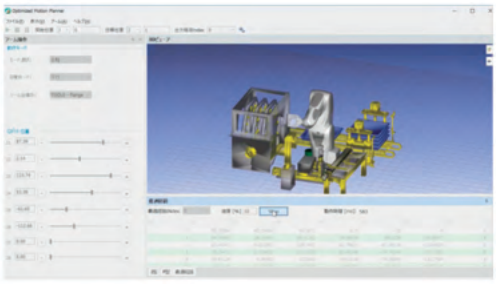
Programs created using 3D Visual Programming can be converted to PacScript, the DENSO Robotics development language. By converting the operational framework created in 3D Visual Programming to PacScript and then adding details, you can create programs that implement complex operations.

Simple programming by choosing from an extensive selection of block programs

Create programs using a flowchart simply by choosing and placing items in line with your application from an extensive selection of block programs. By making it easy to understand the overall program and identify locations that need to be changed, this approach can reduce programming man-hours.

Easy visualization and sharing of equipment operation

3D Visual Programming lets you visually express robot operation. You can easily visualize and share equipment operation, for example when explaining equipment structure to colleagues involved with your project, including production and maintenance personnel who are working with actual robots.



Optimized Motion Planner

When you specify the starting and ending points for a robot operation, the program will automatically generate the path with the shortest cycle time while avoiding obstacles. By allowing robot paths, the design of which until now has relied on user experience, to be generated scientifically, this capability lets both veterans and novices alike realize the same level of performance when operating robots.

Features

Fewer adjustment man-hours

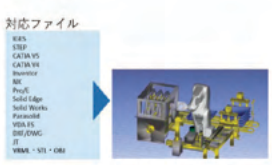
By acquiring CAD data for peripherals in advance, determining starting and ending points, and automatically generating a path while avoiding peripherals, you can significantly reduce the number of man-hours spent on confirmation work using actual equipment and detailed teaching work.

Reduced takt times

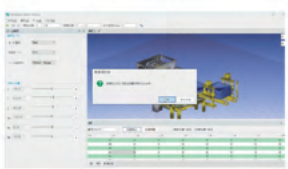
The software helps shorten takt times by calculating the shortest path and generating waste-free robot movements while avoiding collisions with peripherals.

Execution procedure

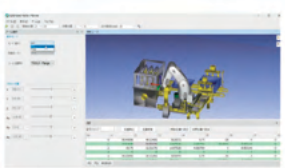
Both veterans and novices alike can easily generate an optimal path using the following procedure:



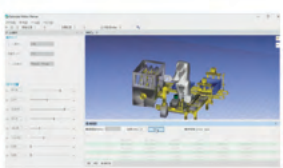
(1) Import CAD data with the Robot Viewer*.



(2) Set the robot's starting and ending points.



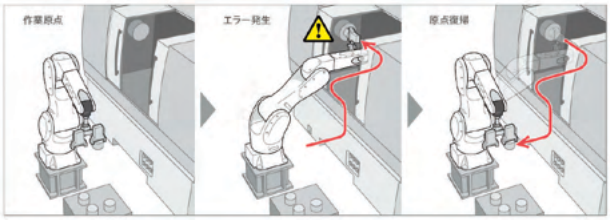
(3) Set via points.



(4) Automatically calculate the path.

*Robot Viewer is a 3D viewer used by the various software components of WINCAPS Plus. It can also be used as a layout verification tool with robots and peripherals.

Return-to-origin guidance



Based on the assumption that the path taken by the robot during automatic operation is safe and free of obstructions, the software uses automatically collected information about the robot's path to generate a path by which it can safety return to the origin. Operations can also be partially played back in reverse.

Features

Elimination of the need to create complex programs

The software completely eliminates the need to spend an enormous number of man-hours on programming while painstakingly avoiding collisions with peripherals in order to return the robot safely to the origin.

Simple return-to-origin operation

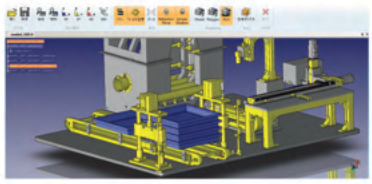
Since the robot can easily be returned to its origin using a Smart TP, functionality is accessible to on-site operators who may not be familiar with robot operation.

System configuration diagram

■ Using the RC9

■ Using the RC8A

Robot Viewer



Robot Viewer is a 3D viewer used by the various software components of WINCAPS Plus. It makes it easy to import 3D CAD data and display CAD models in WINCAPS III. It can also be used as a layout verification tool with converted-output robots and peripherals. *Robot Viewer can be used with WINCAPS III.

Features

Easy import and output of 3D CAD data

Robot Viewer can import 3D CAD data in formats such as STEP, IGES, VRML, and X*. It can also convert CAD models and output them in the VRML and STL formats.
*We plan to add Parasolid support in the future.

Use as a layout verification tool

Robot Viewer can also be used as a layout verification tool with robots and peripherals. Model structure and placement are managed easily using a tree. The ability to simplify and compress or expand placed model shapes makes layout verification easy.

Palletizing Builder

Palletizing Builder simplifies everything from simulating to executing palletizing and depalletizing processes. Once you enter the shape and dimensions of the pallet and cargo, the software performs a series of automatic calculations and displays target positions that take the robot's movable range into account.

Features

Simplifying time-consuming teaching for palletizing and depalletizing

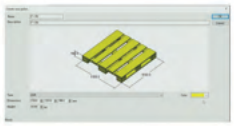
Palletizing Builder dramatically reduces the amount of teaching required for palletizing and depalletizing processes, which until now have required time-consuming programming. Combine with the high-payload, long-arm-reach VMB series and VLA series for an even broader range of uses.

Easy simulation of loading method, weight, and other parameters

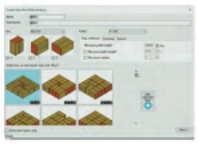
The software makes it easy to set pallet and box sizes. The ability to simulate the optimal box loading method, stack height, and weight for pallets helps save man-hours.

Simple operation

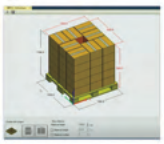
Set the box size.



Set the pallet size.

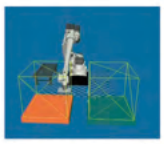


Set the loading method for the pallet.



The software automatically calculates the stack height based on the height settings.

The loading method for each level can be easily customized.



Simulations take into account the robot's movable range.

System Requirements

The following environment is recommended:

	Palletizing Builder	Optimized Motion Planner	Robot Viewer	3D Visual Programming
OS	Windows 10/64 (Version 1803) or later			
Screen size	WXGA (1280×800) or better	Full HD (1920×1080) or better		WXGA (1024×768) or better
CPU	2-core 2 GHz or better	4-core 2 GHz or better		
RAM	8 GB or more	16 GB or more		
GPU	—	Discrete GPU recommended (reliance on onboard graphics is not recommended)		
Other	Microsoft .NET Framework 4.7.2 or later			Microsoft .NET Framework 4.7 or later

*These applications assume that WINCAPS III has been installed on the same computer.

RC Vision

Robot Vision Package

RC Vision is a robot vision application software package that utilizes DENSO Robotics and cameras to support equipment startup.

1st EVP2 Easy Vision Picking 2

■ EVP2 is an image processing application that adds significantly enhanced functionality to EVP's simple operation.
EVP2 is a programing-free image processing application specially developed for use with a "pick & place" robot. This software offers enhanced functionality and several times greater processing power than the previous EVP application, while maintaining the same ease of operation.

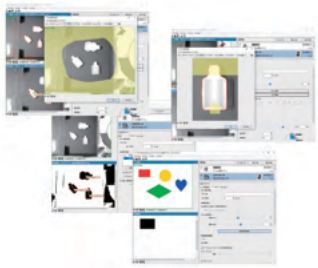
■ EVP2 consists of EVP2 Guidance and EVP2 Runtime.
Image processing operations can be set using the application (EVP2 Guidance) that runs on a PC.
When EVP2 Runtime is running, only the robot controller and connected camera are required for operation.

EVP2

EVP2 Guidance (PC software)
*Option available at additional cost

Features: Simple setup of image processing flow without programming

Versatile search function
- Shape search
- Contrast search
- Blob search
- Color search
- Auxiliary search



Convenient functions
- Model masking
- Search area editing
- Detection method selection

EVP2 Runtime (built-in robot vision software)
*Option available at additional cost

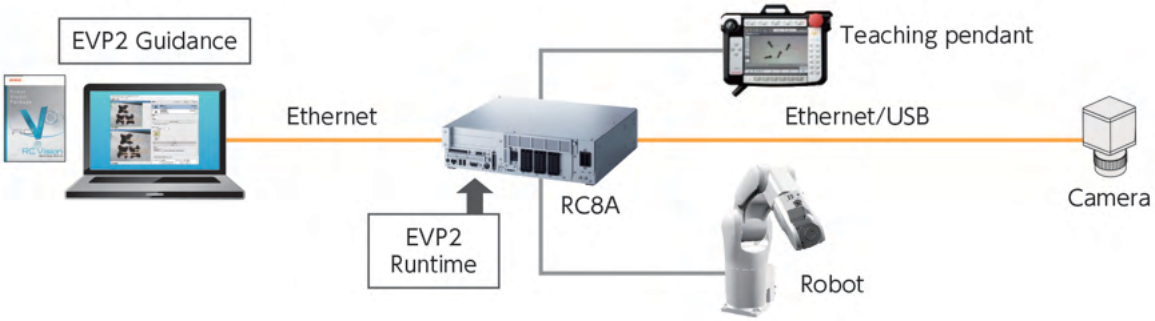
Features: Cut costs with a robot controller that includes a built-in robot vision application for image processing.

Simple configuration
- No PC required
- No visual controller required
- No communication program required for sending image processing results to the robot
- A wide range of compatible cameras

Robot controller with built-in vision application

Features: Significantly improved image processing library and faster image recognition speed (as compared to EVP)
- Contrast search
- Shape search
- Blob search

System configuration diagram



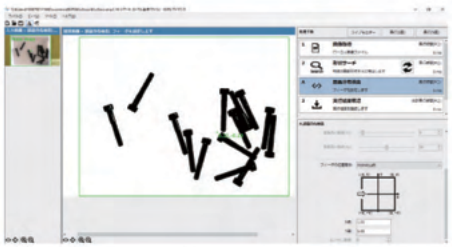
Enhanced basic functionality: Improved robot vision functions

Interference check function

This function prevents the end effector from colliding against adjacent workpieces when grasping the detected workpiece.

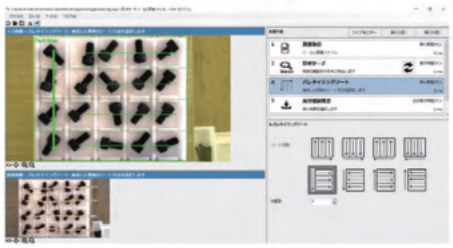
Part presence detection function

This function determines whether the detected workpiece is located within the specified area. The area can be specified based on the check direction, the number of longitudinal divisions and the number of lateral divisions.



Part distribution detection function

The position of the feeder can be controlled by dividing the area and accurately identifying the location of each part.



Palletizing sort function

This function sorts the detected workpieces according to the specified rule. The workpiece sort sequence can be decided based on the sorting direction and the number of divisions.

Operating environment

[OS] Windows® 10
[PC] CPU: 2 GHz or faster multi-core processor, RAM: 4 GB or more, HDD: 4 GB or more

[Recommended cameras] Basler GigE camera (ace series)
iDS USB camera (uEye SE series)
Canon network camera (WebView Livescope series)
Canon network camera (N10-W02)

*Windows is a trademark or registered trademark of Microsoft Corporation in the U.S. and / or other countries.

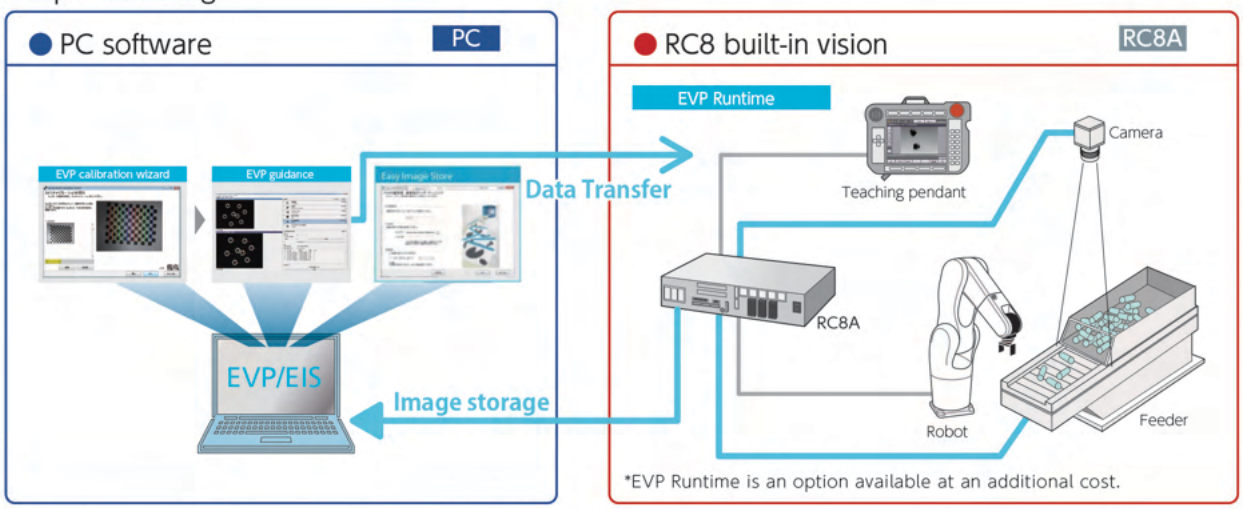
*For more information about EVP, please contact our sales representative.

2ndEIS Easy Image Store

Overview of EIS

EIS is a software to store the images of cameras connected to RC8A. Images taken by the built-in image processing application (EVP) in RC8A are temporarily stored in RC8A and reset when power is turned off. With EIS, the images can be stored automatically in PC as image files.

Expanded image



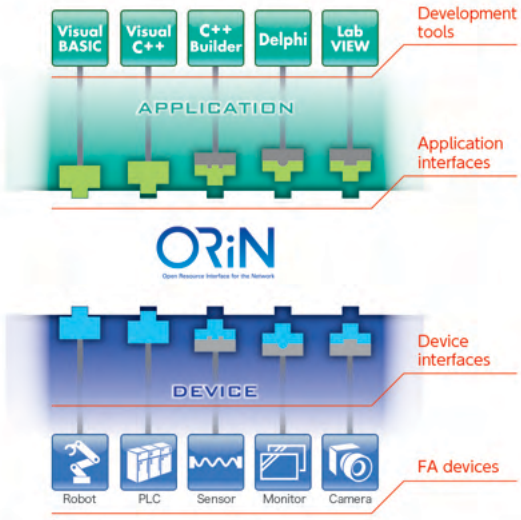
System requirements: [OS] Windows® 10 [PC] CPU: 2 GHz or faster multi-core processor, RAM: 2 GB or more, HDD: 1 GB or more
[Camera] Basler GigE camera (ace series), iDS USB camera (uEye SE series), Canon network camera (WebView Livescope series)

ORiN® 2 SDK

Integration Middleware for PC

ORiN®2 SDK is a software tool kit used to develop an application program or provider based on ORiN®2 specification.

- It provides a standard communication interface for robots as well as various FA peripherals and databases.
- ORiN®2 SDK is mounted with a variety of functions (including a CAO engine, test program, sample program and skeleton provider auto generate tool) to support development.
- The superior expandability of ORiN®2 supports not only industrial robots, but a variety of devices (including PLC, CNC machine tools, bar code readers and RFID) to enable application development that is independent of manufacturer or model.



Features

Provides a standard interface

ORiN®2 enables easy system development that supports distributed object technologies such as DCOM and SOAP, and provides two standard interfaces: the application interface and device interface.

Recycles applications

Equipped with a gateway to reciprocally connect with different standards (OPC and UPnP) and improve reusability of existing applications.

Development tool options

Use any of the following development tools that support OLE (COM, ActiveX):

◎Visual C++ ◎C++ Builder ◎Visual BASIC ◎Delphi ◎LabVIEW ◎Excel, etc.

Create an original provider

With Provider Wizard, a user can create an original provider to expand functions.

*1. This is middleware that provides the client with common functions and the ORiN interface; it is an EXE type COM component that forms the core of ORiN.
*2. This is the communication interface that connects FA devices and the PC; it is a DLL type COM component that eliminates the differences in communication specifications between the various devices.
*3. This is the gateway module to ORiN that provides the OPC (OLE for Process Control) server functions.
*4. This is the gateway module to ORiN that provides the OPC UA (OPC Unified Architecture) server functions. The "OPC UA Server License" is separately required to use CaoOPCUA.
*5. This is data management middleware that collects data from the various FA devices and provides this collected data to CaoSQL client applications (operation monitoring, production command software, etc.).
*6. This is the gateway module to ORiN that provides the UPnP (Universal Plug and Play) device functions.
*7. This is a simple programming development environment that enables the creation of simple application programs using a script language (CaoScript).
*8. Only CaoConfig and CaoTester are offered.

System requirements: [OS] Windows® 10 IoT / 10 / 11 IoT / 11, Windows Server® 2016 / 2019 / 2022
[PC] CPU: 2 GHz or faster multi-core processor, RAM: 2 GB or more, HDD: 1 GB or more free space

Robot Tools

Robot Setup / Maintenance Support Tools

Robot Tools comprises a suite of utility software that supports optimum maintenance and operation of DENSO Robotics.

● It can be used to streamline daily maintenance work and reduce post-installation running costs of robots.

Product features

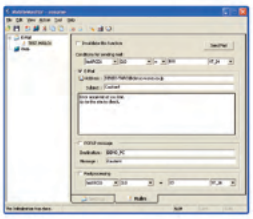
System requirements: [OS] Windows® 7 / 8 / 10 [PC] CPU: Pentium® III 1 GHz or faster, RAM: 512 MB or more, HDD: 500 MB or more

Image Logger

This software helps identify the cause of sudden equipment issues and assembly problems. It captures video before and after issues occur along with associated equipment data (I/O, variables, etc.). By reviewing the video and data, you can pinpoint the cause of the issue and improve the equipment accordingly.

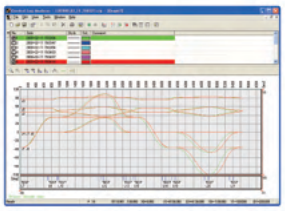
Mobile Monitor

This software monitors controller status and provides email notification of anomalies and other equipment issues, for example to remote workers' mobile phones, so that quick action can be taken.
It helps improve maintenance and streamline operations.



Control Log Analyzer

This software acquires control logs from a specified controller and automatically generates a graph display. It can analyze a robot's control status (for example, to detect problematic waveforms), and it stores the control log as a database so that it can be compared with past data. It helps improve maintainability and helps users visualize (quantify) errors.

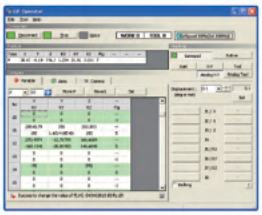


Virtual TP

When the controller is in manual mode, this software serves as a virtual teaching pendant running on a PC so that the controller can be configured (GUI) and monitored remotely. It also improves maintainability and aids in configuration when operating without a mini pendant or teaching pendant.

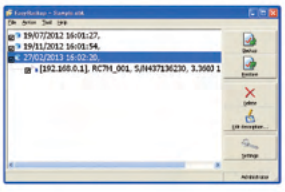
GP Operator

This software lets you connect a robot controller to a PC and provides simple robot control using a mouse or game pad. It also helps developers perform teaching work by allowing them to teach specified variables (P, J, and T types) and control robots using a PC.



Easy Backup

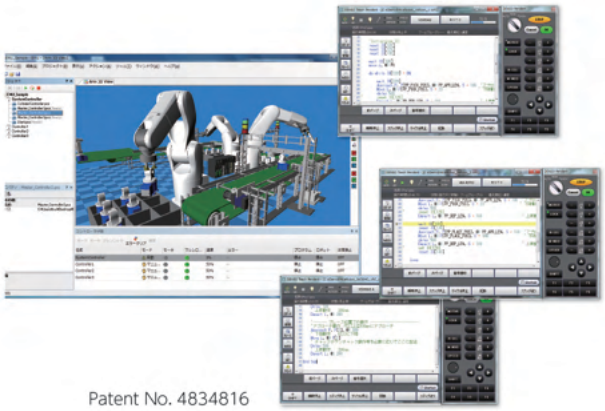
This software creates and restores full backups for multiple controllers. The ability to automatically create full backups reduces work times, while the ability to restore full backups helps speed recovery in the event of a problem.
It helps improve maintenance and streamline operations.



Robot Simulations

EMU (Enhanced MUlti-robot simulator) is a software that allows you to run simulations for multiple DENSO Robotics.

- EMU allows you to use projects created in WINCAPS®III, coordinating with peripheral devices (models) and testing functionality in a state that is both virtual and real.
- EMU helps you achieve vertical startup for preliminary testing and production systems at the design stage for equipment centered on DENSO Robotics.



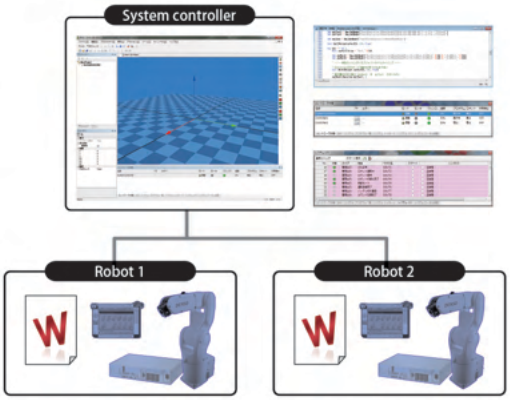
Patent No. 4834816

Features

System requirements: [OS] Windows® 10 / 11 [PC] CPU: 2 GHz or faster multi-core processor, RAM: 2 GB or more, HDD: 1 GB or more
*Usage of EMU will also require the purchase of WINCAPS®III.

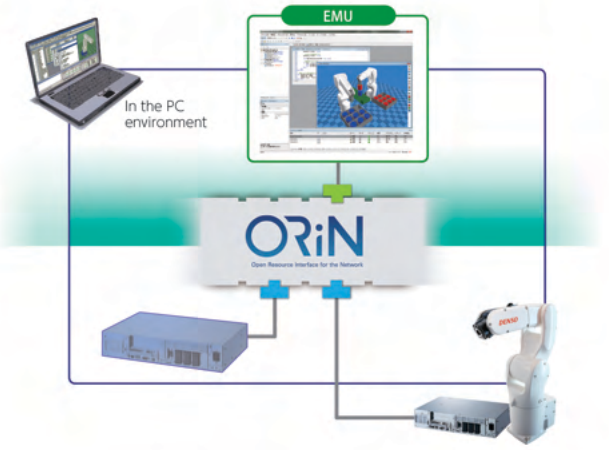
Sequence control

You can control all operating sequences for the entire system by starting up each robot and using variables and I/O from the system controller program. Coordinated operation testing using multiple DENSO Robotics is also possible.



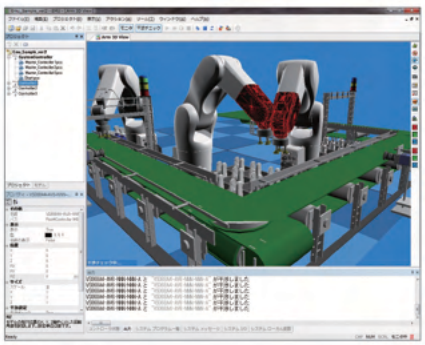
Connection with Machine

Connecting with a machine enables you to view current position information for the robot obtained from the machine in a 3D viewer and authenticate motion in a mixed virtual and real environment.



Interference checking

Being able to check for interference between devices and preliminarily test operating sequences ensures a higher degree of perfection at the initial stage of design while helping shorten development times and reduce costs.



Coordination of peripheral devices

EMU enables testing of the operation of all equipment linked to robots and peripheral devices such as workpiece conveyors and loaders without using the actual equipment.

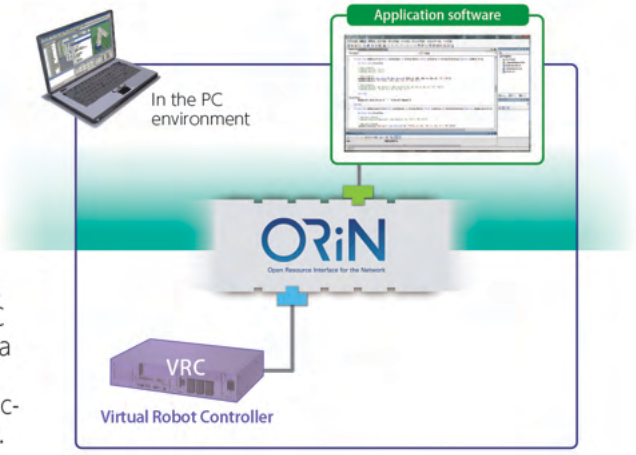
Software

VRC / VRC9

Virtual Robot Controller

As an RC9/RC8A (robot controller) virtual robot module, VRC provides a robot controller virtual environment on a PC.

- When programming in a universal language (Visual C++, Visual BASIC, Delphi, LabVIEW, etc.) on the PC, connecting to the VRC lets you control DENSO Robotics and monitor their statuses in a virtual environment.
- Being able to simulate the operation of actual robots without actually using them dramatically improves development efficiency.



Features

Provides GUI

As a tool to make VRC states visible, the VRC Teach Pendant allows for the same usage and monitoring as the teach pendant. This tool enables you to check a variety of information including current position, variables, I/O and the error log.

Current position data

Variables

I/O

Error log

Simulation Link

Linking to VRC from commercially available simulation software provides feedback of RC9/RC8A (virtual environment) information (such as current position [P type, J type, and T type], variables, and I/O), that can be expressed by GUI of various simulation software products. Path and cycle time for robot motion can be expressed just as on the actual machine to provide simulations even closer to actual execution.

System requirements:
[OS] Windows® 10 / 11
[PC] CPU: 2 GHz or faster multi-core processor, RAM: 2 GB or more, HDD: 1 GB or more
*Usage of VRC will also require the purchase of the ORiN®2 SDK.

Software

Mobile Tools

Applications for smart devices

Mobile Tools is a set of application software for smart devices that support equipment startup or maintenance using DENSO Robotics products.

Remote TP

- Remote TP displays the screens equivalent to those on the teaching pendant on the smart devices that the user is accustomed, enabling prompt response such as robot controller (RC8A) settings or status check by using the smart devices on hand even if teaching pendant or PC is not available.
- This application assists maintenance such as assisting the settings when using the mini-pendant or error/log check when TP is not available.
- This function takes advantage of smart devices features to improve efficiency.

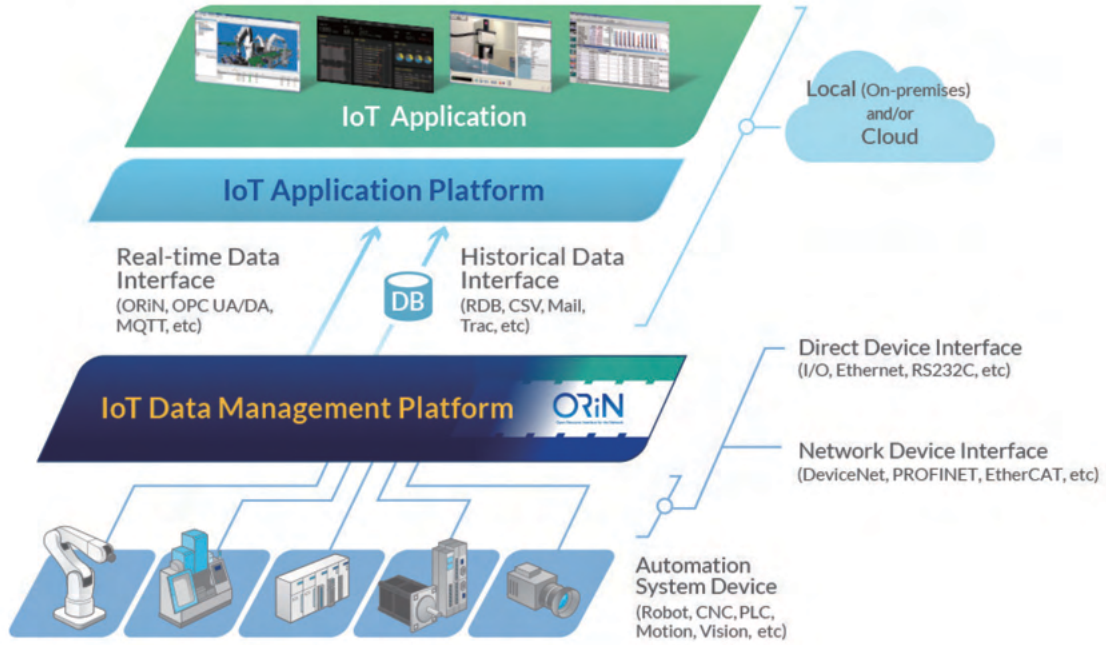
Android terminal application

System requirements: [OS] Android 5.0 to 10.0, Tablet screen size: 4.6 inches or larger
[Robot controller] RC8 Ver.1.10.3 or later

IoT Products

Connectivity changes the world. Connectivity ushers in the next generation.

Factory implementation of IoT involves gathering information from various devices and transferring this information to a host system. DENSO WAVE offers IoT products designed exclusively for use with the IoT Data Management Platform—a platform that achieves uniform accessibility with both existing and newly installed equipment based on Open Robot/Resource Interface Network (ORiN) technology.



IoT Data Server

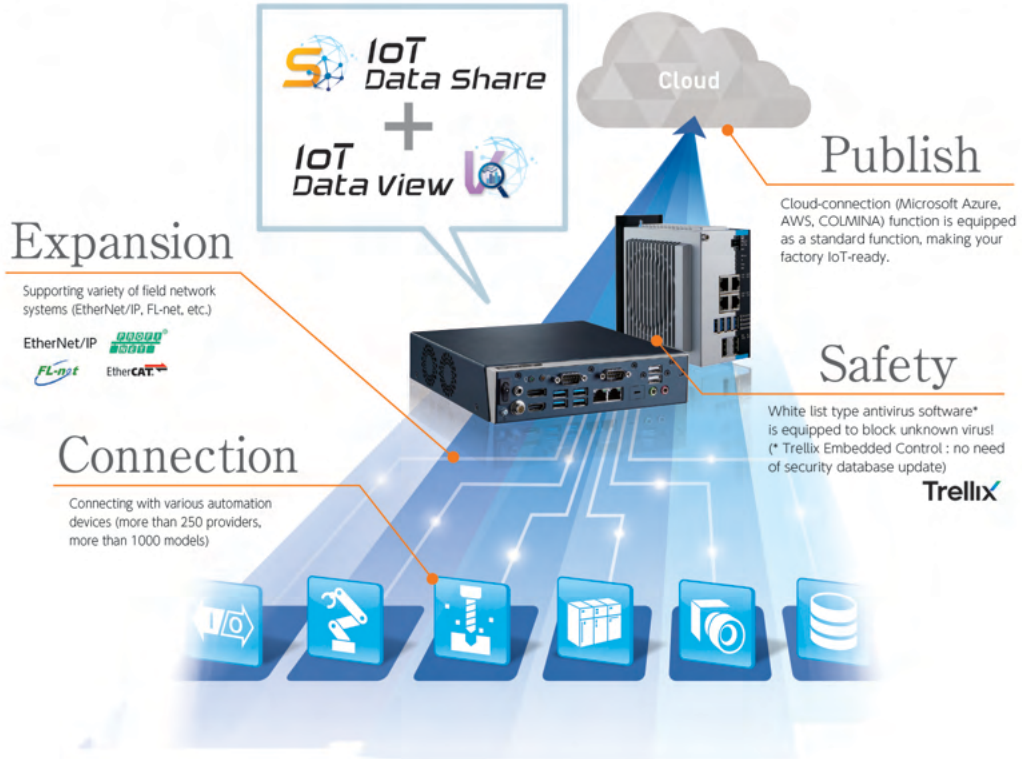
[Data Integration Controller]

Installation-free design for immediate use

IoT Data Server is a "Data Integration Controller" consisting of high reliable industrial computer and non-programming data integration software.

ORiN Version 2

It equips standard data management functions developed especially for data collection, process, saving, notice and publishing. These functions will help the data management in various scenes from the production cell system to production line, factory, cloud system.



IoT Data Share

[Data Integration Software]

Easy setup with thanks to programming-free implementation

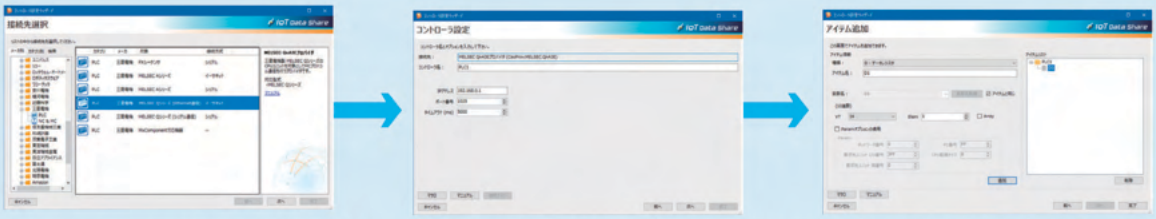
IoT Data Share is "Data Integration Software" that enables to connect various automation devices without programming and to provide functions of data collect, process, save, notify and publish.

Programming-free linking between equipment and system

Connecting to PLC with IoT Data Share

Setting with dedicated wizard only

Simply select the destination and register in the controller setting wizard



No need of special knowledge for software development. Easy and simple operation to connect equipment and applications.

● System requirements: [OS] Windows 10/11, Windows Server 2016/2019/2022
[PC] CPU: Intel® Core i3 2.4 GHz or faster, RAM: 4 GB or more, HDD: 1 GB or more free space

IoT Data View

[Data visualization dashboard]

Visualize the collected data in a simple way

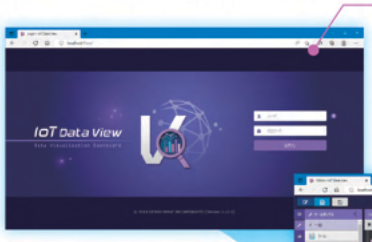
IoT Data View is "Data Visualization Dashboard", which cooperates with IoT Data Share and easily visualize the collected data without programming.

ORiN Version 2

Using the supported web browser, dashboard screen can be created by simply linking collected data to the displayed parts like label, lamp or graph.

Login screen

Control referable information and executable functions according to the login level.



Edit screen

Create dashboard screen instinctively by drag and drop.

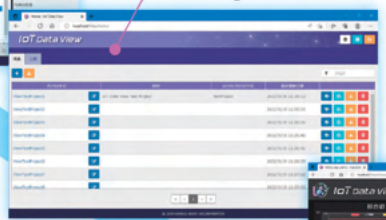
- **Label** Outputs data as text
- **Image** Import image and show as background image or output image
- **Lamp** Change the color according to the data
- **Graph** Output data graph (selectable from bar, line or pie)

etc.

Visualize the data collected by IoT Data Share on a web browser screen.

Home screen

Manage the created dashboard in a list.



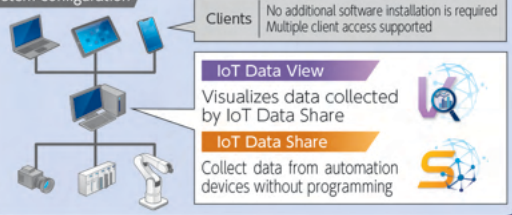
Publication screen

Created dashboard can be displayed on the supported browser.

Simple visualization of equipment information without programming!

Without software expertise, you can visualize equipment data with simple configuration only.

System configuration



● System requirements
【OS】
Windows 10/11、
Windows Server 2016/2019/2022
【PC】
CPU: Intel® Core i3 2.4 GHz or faster, RAM: 4 GB or more, HDD: 2 GB or more free space
* "IoT Data Share" is separately required to use IoT Data View.

Supported languages: Japanese, English, Chinese (Simplified)

DENSO Robotics Main Functions

Robust compliance control function with force sensor

Option available at additional cost

Configure force control easily, simply by specifying hardness levels
Reduce man-hours spent on setting up force control by about 60%*1 compared to the conventional approach.
Utilize a leading-edge force control algorithm with exceptionally improved robustness.*2

*1 Compared to previous Denso Wave products.
*2 Robustness refers to the resilience of a system or machine with regard to disturbances. It signals flexibility in the face of external factors and lack of variability.
* The function does not provide safety capability for reducing force in the event of collisions or contact with human workers.

Simple parameters

Whereas conventional force control systems require the configuration of multiple force control parameters, Denso Wave's Robust compliance control function with force sensor can be configured easily simply by specifying a hardness level for contact for each axis.

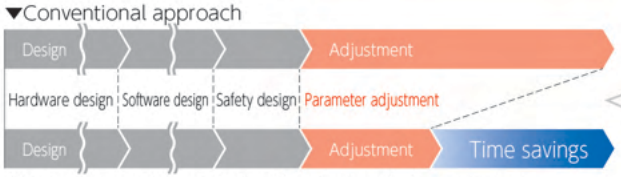
Conventional compliance control function with force sensor: Total of 36 parameters across 6 categories

Robust compliance control with force sensor adjustment items: Total of 6 parameters in 1 category

Simpler configuration thanks to significantly fewer parameters and adjustment

Item			Adjustment range	Details
Hardness level of contact target	Translation component	X	0 to 3	Set based on the hardness (rigidity) of the contact targets (workpiece and tool). Higher values allow faster movements. Translation: 0 (soft) to 3 (hard) Rotation: 0 (soft) to 1 (hard)
		Y	0 to 3	
		Z	0 to 3	
	Rotation component	Rx	0 to 1	
		Ry	0 to 1	
		Rz	0 to 1	

▼Conventional approach



▲Robust compliance control function with force sensor

Reduce man-hours spent on setting up force control by **about 60% compared** to the conventional approach, thanks to significantly fewer adjustment parameters.

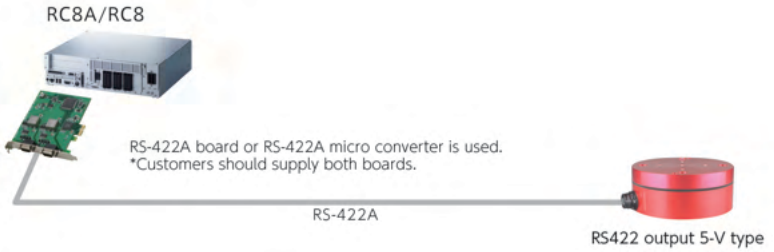
Components*		
(1) Force sensor	Select one	(5-1) RS-422A communication board
(2) Force sensor-mounting stay		(5-2) RS-422A microconverter
(3) Tool	(6) Power supply (24 V DC)	
(4) Tool-mounting stay	(7) Cable between sensor and RS-422A communications board	
	(8) Robust compliance control function with force sensor software license	

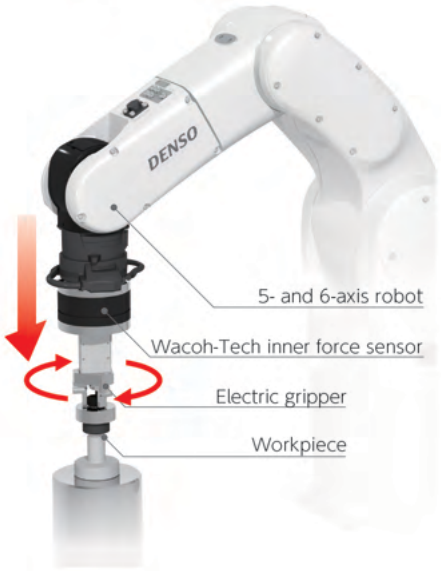
* The customer is responsible for providing components (1) through (7).

Compliance control Function with force sensor Option available at additional cost

Feedback control from a force sensor and DENSO exclusive strength control algorithm enable detailed copying, fitting and press action. Dedicated GUI allows monitoring of feedback values from the force sensor and enables force control settings to be adjusted to aid reduction of man-hours to startup.

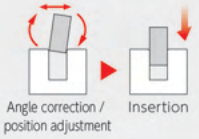
System configuration diagram



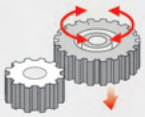


Main applications

Copying action at insertion of parts



Fitting needed in assembly



Press action such as applying constant pressure

Models that support Wacoh-Tech inner force sensor

WEF-6A200-4-RCD	RS422 type	Load rating: 200 N
WEF-6A200-4-RCD-B	RS422 type	Load rating: 200 N
WEF-6A200-20-RCD-B	RS422 type	Load rating: 200 N
WEF-6A500-10-RCD-B	RS422 type	Load rating: 500 N
WEF-6A1000-30-RCD-B	RS422 type	Load rating: 1000 N

Supported Robots

All models of RC8A-compatible DENSO 6-axis robots.
All models of DENSO 4-axis robots.
COBOTTA PRO of CRC9-compatible
*Internal wiring can be used with VS050, 060, 068, and 087 models with communication interface flange-A.

High-precision calibration (Hi-Cal) Option available at additional cost

Improved absolute precision and reduced variation in robot machine enables significant reduction of the worktime in teaching.

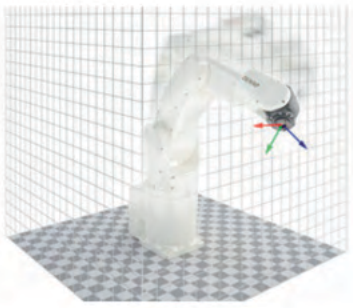
Benefits

Absolute accuracy, one of the three types of robot accuracy, has been improved to yield the following benefits:

The worktime in re-teaching when robots are exchanged is reduced.
Replacing one robot for which high-precision calibration has been performed with another reduces disparities between teaching points and shortens adjustment times after replacement.

Increased vision correction accuracy
Improved vision and correction accuracy of 2D/3D vision picking that is subject to rotation and posture change make it possible to grip workpieces more precisely.

Increased accuracy for tool offsets
This improvement shows its worth in tasks like the alignment or assembly of minuscule workpieces that require accuracy.



Supported Robots

VS-050 / 060 / 068 / 087 standard type

Hi-CAL High-Accuracy Calibration

Mirror control Option available at additional cost

This remote control function operates a remotely located manipulator (slave) using instructions from a control device (master).

Supported robots: All models of RC9/RC8A-compatible (slave) DENSO 5- and 6-axis robots

Safe, intuitive control and teaching system

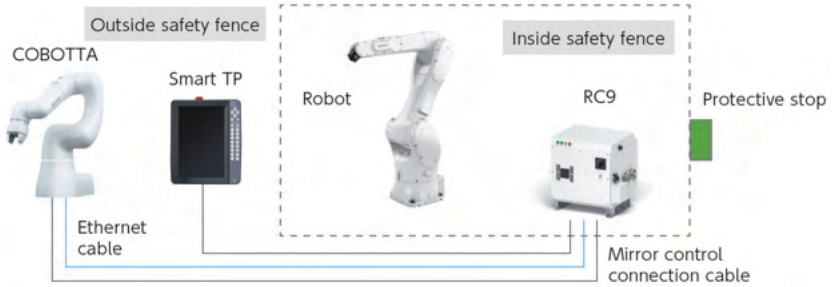
Using a COBOTTA collaborative robot as a master device, you can intuitively control a large robot by operating the COBOTTA's arm. You can also use the robot's virtual fence function to specify the slave robot's movable range to ensure safety.

- Realize intuitive robot teaching and control, even if you're not familiar with programming.
- The ability to control the robot from outside a clean environment such as a pharmaceutical manufacturing process lets you keep out foreign materials and prevent worker contamination. *1

Use of this capability requires a master/slave expansion function license.

*1: For safety reasons, use is limited to a maximum cable length of 20 m and the area within which the slave robot is visible.

System configuration diagram



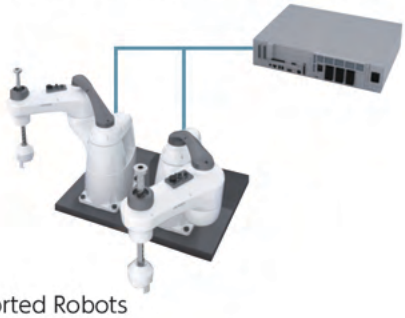
Master robot

COBOTTA

Item	Specifications
Arm length (No. 1 arm + No. 2 arm)	342.5 (165 + 177.5) mm
Rated payload (Maximum payload)	0.5 kg (0.7 kg within ±10° with the wrist angled downward)
Position repeatability	±0.05 mm
Protection grade	COBOTTA unit: IP30 AC adapter, AC cable: IP20

Dual arm control Option available at additional cost

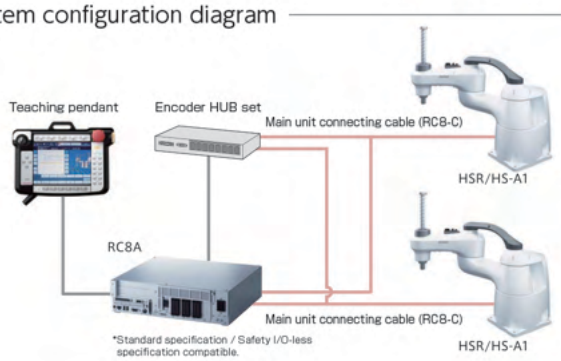
Enables control of two robots from a single controller. This feature reduces adjustment labor hours, installation space requirements, and initial costs while achieving increased speed.



Supported Robots

HSR, HS-A1

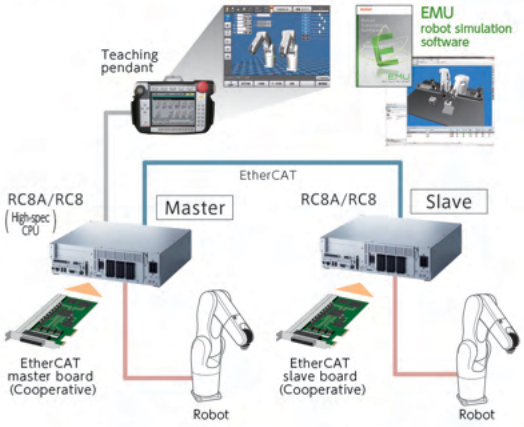
System configuration diagram

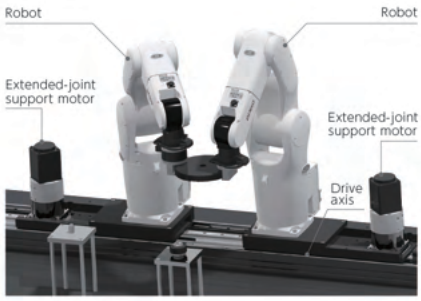


Cooperative control Option available at additional cost

The cooperative control function implements synchronized operation of multiple robots, allowing the transport or assembly of large or heavy objects that would be difficult to accomplish with a single robot. The ability to create and execute programs for multiple robots using a single controller simplifies programming and configuration.

System configuration diagram





Main applications

Transport and assembly of large or heavy objects.

Supported robots

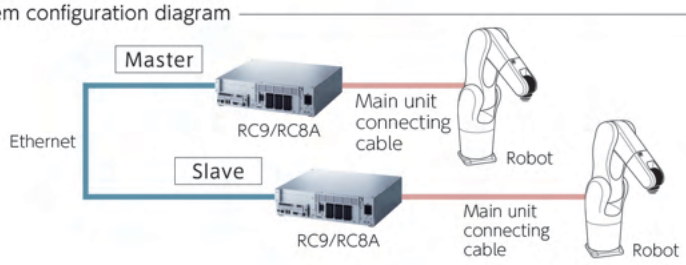
All models of RC8A-compatible DENSO 6-axis robots.
All models of DENSO 4-axis robots.

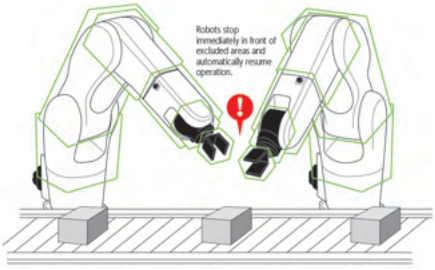
Exclusive control Option available at additional cost

Entry of multiple robots into excluded areas can be controlled.

This function restricts entry into the work area to one robot when a work area is being shared by multiple robots.
Entry into exclusive areas is prohibited by decelerating or stopping other robots that attempt to enter.

System configuration diagram





*A maximum number of exclusion controllable robots is 4.

Supported Robots

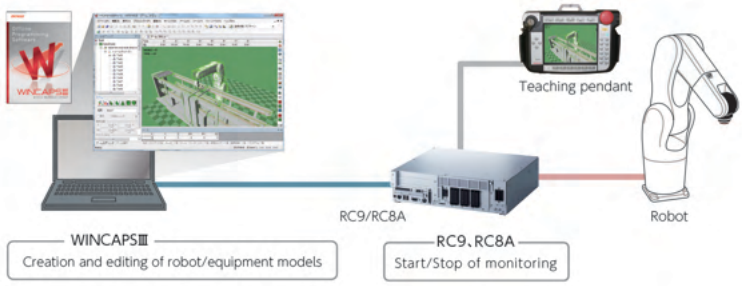
All robot models compatible with CRC9 or RC9 or RC8A

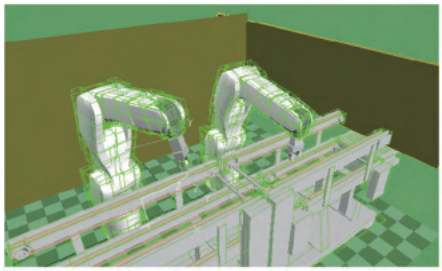
Virtual fence Option available at additional cost

Eliminates interference between robots and peripherals.

This function models robots, tools, and other equipment and prevents collisions between monitored models.

System configuration diagram





*Applicable to multiple robots (2 max.) only when they are cooperated.

Supported Robots

All robot models compatible with CRC9 or RC9 or RC8A

Conveyor tracking Option available at additional cost

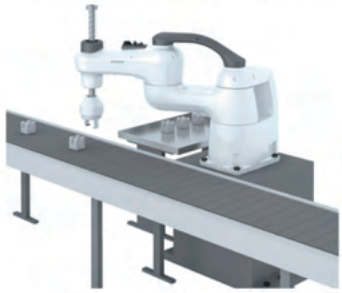
Robot tracks the workpiece to Pick & Place without stopping the conveyor. Use a wizard-type GUI to easily adjust complex conveyor tracking. In addition, free curve interpolation control is also possible during conveyor tracking.

Sensor tracking

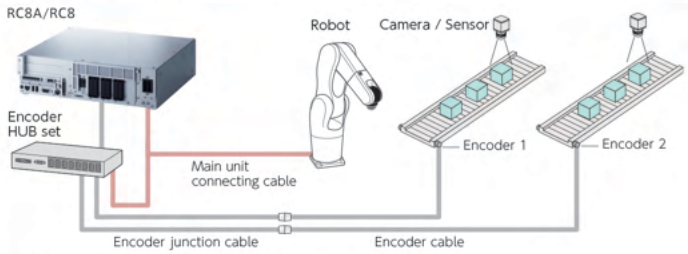
This function registers the position of workpieces crossing in front of a photoelectric sensor in advance, calculates where each workpiece will move, and controls the robot so as to track it.

Vision tracking

This function registers the position and orientation of workpieces detected by a vision sensor using image recognition, calculates where each workpiece will move, and controls the robot so as to track it.



System configuration diagram



Easy, wizard-style setup

Main applications

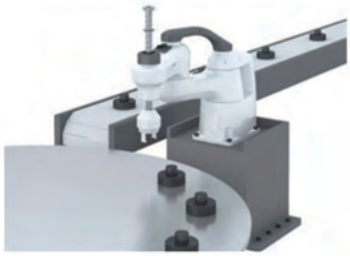
Picking and packaging trays of food products / medical and pharmaceutical product workpieces

Supported Robots

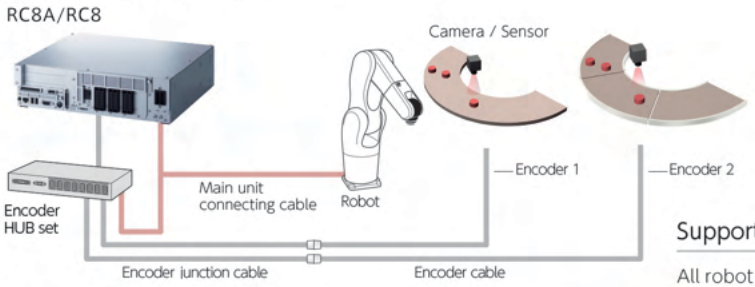
All robot models compatible with RC8A

Circular tracking Option available at additional cost

The conveyor tracking is compatible with circular conveyors.
Robot tracking of workpieces moving in a circular orbit can be set using a wizard-type GUI similar to the conventional linear conveyor tracking.



System configuration diagram



Supported Robots

All robot models compatible with RC8A

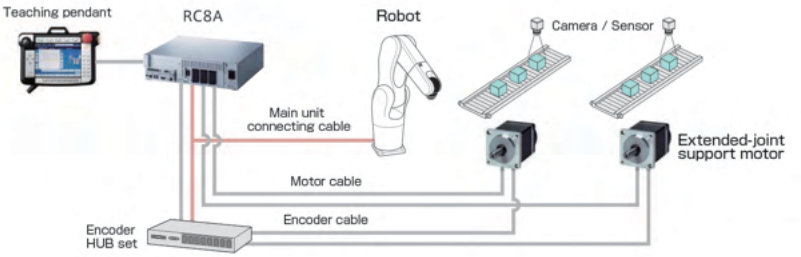
Extended-joint tracking Option available at additional cost

The conveyor and robot operations are controlled concurrently, allowing accurate tracking even in the event of sudden acceleration or deceleration. This is especially useful and convenient in processes involving arranging and transporting workpieces before or after feeding to packaging equipment—processes commonly encountered in the manufacture of food, pharmaceuticals, and cosmetics products.

Supported Robots

All robot models compatible with RC8A

System configuration diagram



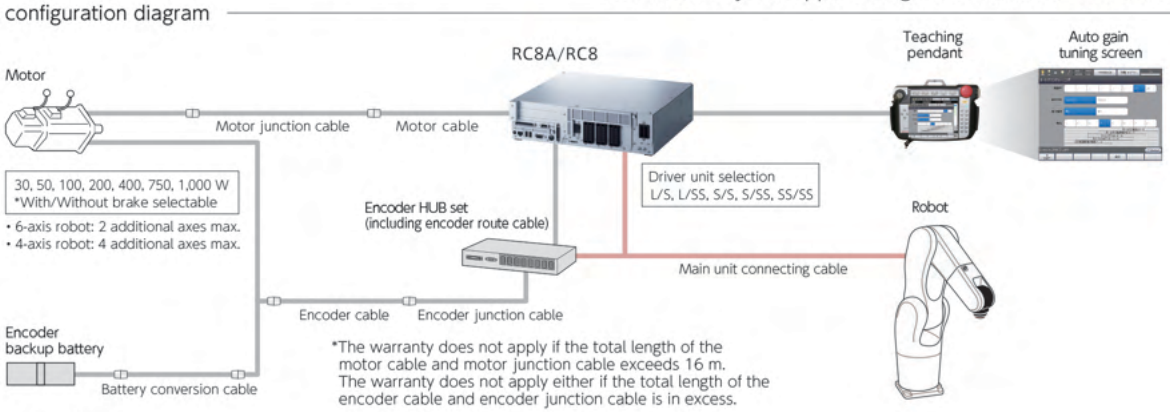
Extended-joint support control Option available at additional cost

Extended-joint support can be controlled with the same interface as the robot.
Easy adjustment is made possible by auto gain tuning.

System configuration diagram

This function makes it possible to control a robot's peripheral devices, for example a drive axis, servo hand, or tray changer, as an extended-joint support using the same interface as the robot.

System configuration diagram



Main applications

Robot drive axis / servo hand, device to determine position

Supported Robots

All robot models compatible with RC9 or RC8A

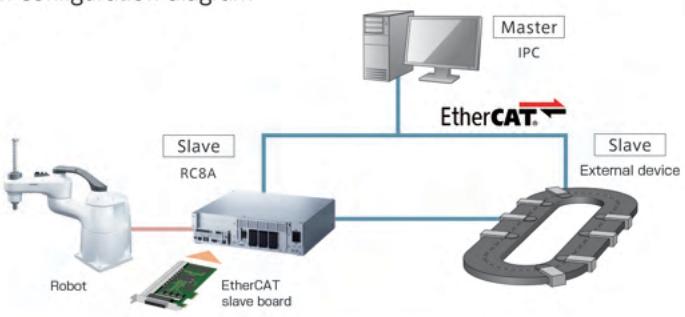
EtherCAT Slave motion Option available at additional cost

Via EtherCAT, this integrated development environment using the TwinCAT3 PC-base integration software enables centralized control of a robot and other devices based on a generated track from an IPC equipped with EtherCAT Master.

Supported Robots

All robot models compatible with RC8A

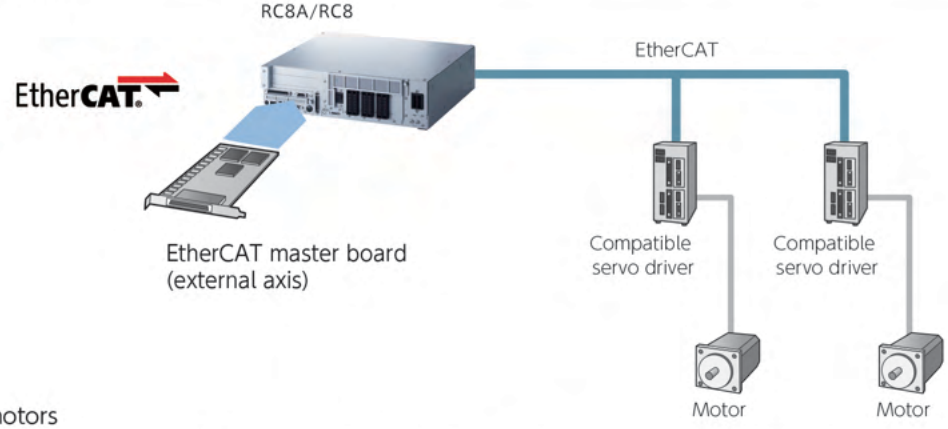
System configuration diagram



External axis control Option available at additional cost

Servo motors of any capacity can be controlled by expanding the EtherCAT master board (external axis).

System configuration diagram



Supported servomotors

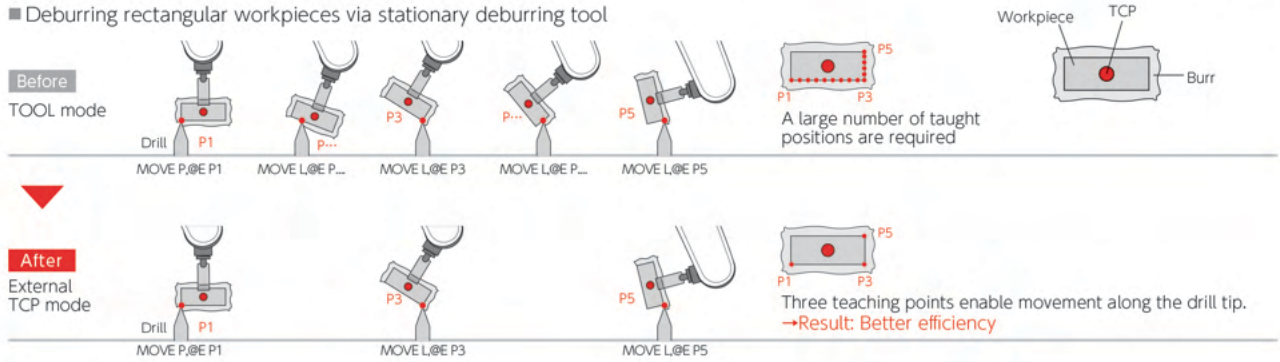
Sanyo Denki Co., Ltd.: SANMOTION R ADVANCED MODEL EtherCAT (H-type only)
HIWIN CORPORATION: D1-N / D2T AC servo motors & Linear motors
Delta Electronics, Inc.: ASDA-A2-E
Panasonic Corporation: MINAS A5B/A6B

External TCP Option available at additional cost

Rotation around a defined center point of the workpiece allows for an easier method of teaching based on target objects.

The external TCP function reduces the number of teaching points when performing CP operation (linear or arc) while the robot is holding a workpiece, for example when you wish to remove burrs from the workpiece using a drill that's mounted on the device or when you wish to apply a sealant coating to a workpiece using a mounted sealant gun.

■ Deburring rectangular workpieces via stationary deburring tool



Main applications

Deburring and sealant coating

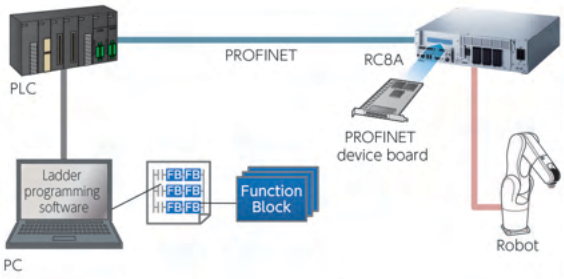
Supported Robots

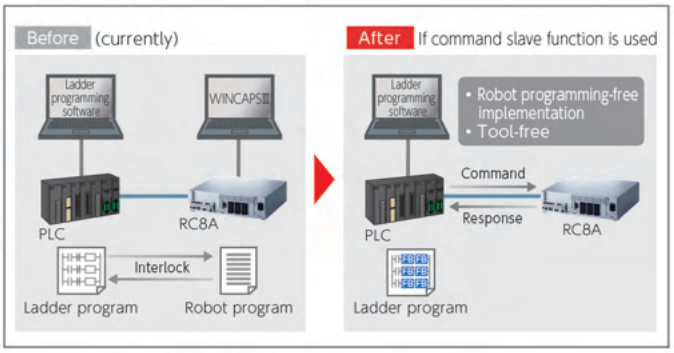
All robot models compatible with CRC9 or RC9 or RC8A

Command slave Option included

Robots can be controlled from PLC languages (ladder programs).
Function block (FB) supports 130 types of robot commands.

System configuration diagram





Main applications

Robot control from PLC

Supported Robots

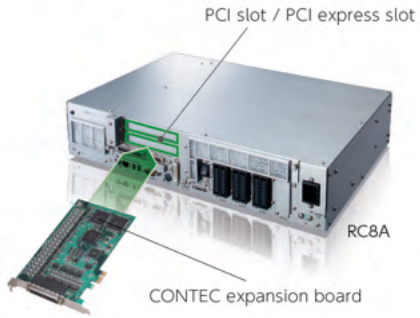
All robot models compatible with RC8A

Supported PLCs

SIEMENS: SIMATIC S7-1500
Rockwell Automation: Model Compatible with STUDIO 5000 Logix Designer Version 30
CODESYS V3

Supports CONTEC expansion boards Option included*

Approximately 200 CONTEC expansion boards are supported.



Supported Boards

*Additional costs apply to the motion control board expansion option only.

- Analog I/O board
- Analog input board
- Analog output board
- Motion control board*
- Digital input board
- Digital output board
- Serial communications board (RS232C / 422 / 485)

Supported Robots

All robot models compatible with RC8A

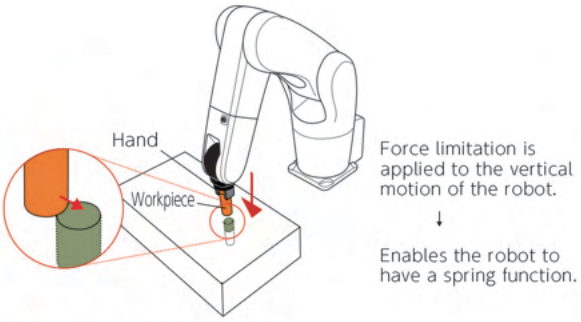
Compliance control function

Control the force to protect the workpiece and hand from excessive loads.

This function can be used to control force returning to the motor on each axis to absorb misalignment. It's effective when used in work that involves contact with the target object, for example when mating or fitting together parts.

Main applications

Product assembly



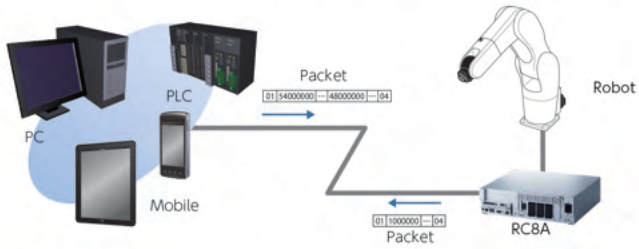
Supported Robots

VP series
VS series: 050 / 060 / 068 / 087 / 6556 / 6577
VM series

*When precision is the required force control, please use compliance control function with force sensor (an option available at additional cost).

b-CAP (communications protocol)

Send motion command packets from PC, PLC and other devices to directly control a robot.

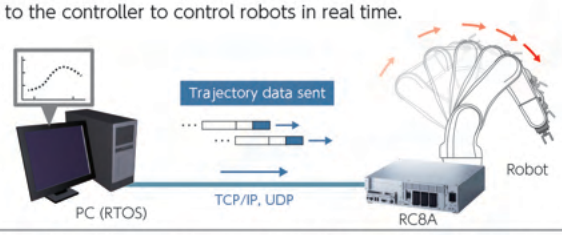


Supported Robots

VP series
VS series: 050 / 060 / 068 / 087 / 6556 / 6577
VM series, HSR® series, HS-A1 series, HM series, XR series
VMB series, VLA series, COBOTTA PRO series

b-CAP slave Option included RC8A

Possible to send PC-generated trajectory data to the controller to control robots in real time.

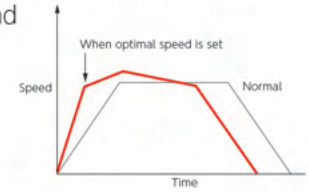


*Use of the EtherCAT slave board (Motion) enables EtherCAT communication.

Optimal speed setting

Motion speed and acceleration is optimized to correspond to the payload on the robot end to reduce cycle time.

The weight and location of the center of gravity of tools and workpieces attached to the end of a robot arm cause the optimal speed and acceleration to vary. Optimized speed control allows the user to set the weight, location of the center of gravity, and mode for tools and workpieces based on the robot's end load and posture.



Supported Robots

VP series
VS series: 050 / 060 / 068 / 087 / 6556 / 6577
VM series, HSR® series, HS-A1 series, HM series, XR series
VMB series, VLA series, COBOTTA PRO series

Control panel function

The teaching pendant screen can be customized as a control panel of robot and peripheral devices.

WINCAPS III, the offline programming software, can create screens from PC.

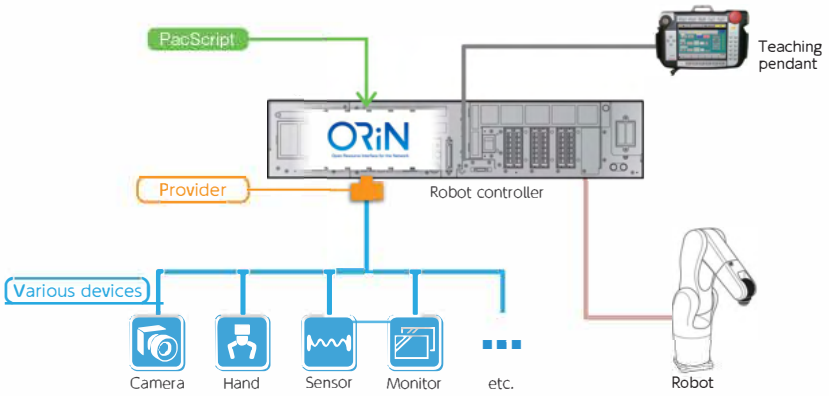
Supported Robots

VP series
VS series: 050 / 060 / 068 / 087 / 6556 / 6577
VM series, HSR® series, HS-A1 series, HM series, XR series
VMB series, VLA series, COBOTTA PRO series

Provider

Provider refers to the device interface used to directly control a variety of Factory Automation products (image processing equipment, sensors or hands) from PacScript (DENSO Robotics language).

Basic configuration



Supported product list

Category	Manufacturer	Product / Series
Robot	Yamaha Motor Co., Ltd.	SR1 / DRCX / RCX
	IAI Corporation	P-CON / E-CON / SEL
Image processing equipment	OMRON Corporation	FZ3 / FZ4 / FZM1 / FZ5 / FH / FQ-M / FQ2
	Keyence Corporation	XG / XGX/ CV / CVX
	Panasonic Industrial Devices SUNX Co., Ltd.	PV series
	Cognex Corporation	In-Sight series
	Sharp Manufacturing Systems Corporation	IV series
	Canon Inc.	VB-H43B / VB-M42B
	Matrox	Matrox Design Assistant
	Leimac Ltd.	IPPA series
	BAUMER	VeriSens Smart Camera
	SICK	PLOC2D series
Non-contact IC card reader/ writers	DENSO Corporation	PR-450, PR-550, QK12-IC
QR Code scanners	DENSO Corporation	Active USB-COM port driver compatible models
RFID reader/writers	DENSO Corporation	SE1-HU-P
Parts feeders	flexfactory	anyfeed series
	Asyril	Asycube series / EYE+
Servo hands	KOGANEI Corporation	EWHA series
Network modules	Balluff	BNI EIP-507-005-Z040 EtherNet/IP IO-Link masters BNI004A, BNI009T, BNI006A, BNI007N, BNI00AA
Sensors	Wacoh-Tech Inc.	DynPick series
	ATI	F/T models
	SINTOKOGIO	ZYXer series
Displacement sensors	KEYENCE	LJ-V7000, LK-G3000, LK-G3000P, LK-G3000V, and LK-G3000PV
Laser markers	KEYENCE	MD-X1000, 1500, MD-F3200, 5200, MD-U1000, and ML-Z9600
Modbus RTU/ASCII/TCP	—	—
Printers	EPSON	Models that support ESC/POS commands
Lightweight modules	MettlerToledo	WMF204C-W/IE
Torque sensors	Daiichiseiko Co., Ltd.	ESTORQ / ES-Gripper
LED lighting	CCS Inc.	PD3 series
	Optex FA Co., Ltd.	OPPD 30E

To ensure safe usage of products

- Please read the instruction manual thoroughly and use products following proper procedures.
- For ease of clarity and understanding, safety equipment and devices stipulated by law, such as safety fences, are not shown in photographs and illustrations in this catalog.

DENSO WAVE INCORPORATED

RoHS compliant The robots and controllers in this catalog comply with the RoHS Directive. For details, see our website.
